ACRUX

ACRUX AREA MASTER

It takes name from one of the brightest stars of the Milky Way, this brilliant rod which offers a combination of extreme lightness and unexpected responsiveness, thanks to Rapture technology.

Highly specialized rods designed for Spoon and Crankbait for Trout Area. Blank made from SX4 Nano Carbon with tubular top; butt section wrapped by crossed carbon bands (CXC Carbon) to contrast torsion and develop high reactivity and casting accuracy (Ultimate Performance Blank). Exclusive double tapered carbon handle with fantastic carbon fore grip. Ultralight Seaguide SiC-RS single leg guides, ideal for braided lines. Components are also at the top of the game, in a perfect combinations between traditions and innovations.

Fantastic carbon and steel reel seat, built around the original Fuji reel seat and finely completed by wonderful details.

Exclusive double tapered carbon handle with fantastic carbon fore grip.

AcruX rods with Solid Tip provide exceptional sensitivity to bites, maintaining constant contact with the lure even when using extremely lightweight models.

The solid tip models stand out for their elegant blue color, which characterizes the trims, metal rings and other elements of the rod.

Special guides with SiC-RS ultralight ring offering extraordinary properties of smoothness and heat dispersion. Tangle free stainless steel K frame.

GUARDIAN AREA GAME

Designed specifically for the Trout Area with spoons and crankbaits, these rods develop a nice and sweet parabolic action to satisfy both match anglers and pure amateurs of this discipline.

Featuring a superslim blank made from CX-1 Micro Pitch high modulus carbon, with a spigot joint and an extremely sensitive tubular top section, they allow you to feel every movement of the lure during the retrieve. Full high density EVA handle grip with laser engraved Rapture logo. Reel seat with stable rubber body and very light woven carbon hoods. The guides feature a SiC ring and an awesome single-shank frame, an ultralight solution that leaves the blank total freedom to express all its reactivity and, at the same time, it facilitates the use of braided lines.

AREA MASTER

The authentic Area Master is an eclectic sportsman, who exalts himself in the close competition with the best, excels in casting and knows how to concentrate on the millimetric walk of the lure, until he feels through the line what for ordinary mortals is nothing important.

To this special fisherman Rapture dedicates a refined series of rods with a rubberized reel seat, able to immediately integrate into the palm of the hand. The blank is very thin and takes advantage from the physical properties of CX-1 Micro Pitch carbon, a material that could be used to produce unrivalled guitar strings, as it is able to amplify the finest vibrations. The K profile guides were originally born for braided lines, because their frame can prevent the formation of tangles, dissipating them from the early stage. The larger ones, starting from the reel, are of a scalar diameter, but the later ones, particularly small, are all identical to ease the gentle flow of the line and prolong the flight of the smallest lure.

Minimal screw reel seat, built around a Woven Carbon body with contact windows to the blank.

Specific guide configuration for ultralight lure's handling with thin braided lines.

Exclusive flexible joint which improves the action curve and dampens oscillations (CX joint).

DRONE TX AREA

Extremely light, balanced and precise, with an attractive dressing and superior handling, which starts from the essential reel seat. One of the most successful Rapture creations in the Trout Area segment.

But the Drone TX Area is not afraid to face the classic competitions on medium-small sized trout, nor the exciting battles with those specimens to be immediately shared on social media. For all circumstances it has the right answer, because the first specialty of the CX-1 Micro Pitch carbon, from which its blank is structured, is exactly the calibrated reactivity to stress, always within the framework of extreme structural reliability. An element of great technical relevance is the CX Joint, where the diagonal orientation of the carbon fibers dissipates any stress, directing it upstream and downstream to avoid the unpleasant "flat area" which is the business card of standard level rods. Thus the rod behaves like a one-piece blank, projecting the smallest lure at the desired point, with great precision, even in conditions of headwind.

DIAVEL AREA EDITION

Specialisation in trout fishing technology has been driven mainly by the match circuit, which has given a new impetus to the Rapture's R&D team to create more and more high-performing equipment.

The Diavel Area Edition series of rods is a shining example of how this chain of knowledge can be translated into tools that are pleasant to use, effective in their technical task and, ultimately, aesthetically pleasing. The range consists of two well-differentiated rods, with sophisticated magenta and blue decorations for instant recognition during the frenetic competition phases. Blue identifies the 5'8", it's the perfect rod for fishing with crankbaits or for the beginning of the session when speed is important, and bites are easier to take. While the magenta makes the 5'10" instantly recognisable, a softer action rod is suitable for spoons and the later stages, when the trout get tougher and the lines thinner, when losing a fish on the retrieve can cost you the competition.

SS SUPER

XLAKE AREA

Simple, essential, but highly efficient, Xlake Area puts a perfect action curve at the service of the user, capable of protecting the thinnest lines from the reaction of any large Rainbows.

Its special tubular top section, progressive and ultra-sensitive, accompanies the driven swimming path of the spoons and small minnows through the medium depths of the lakes. Seeing it under full bend, with those fantastic single-leg guides, as light as well as elegant, is pure pleasure that adds to that of welcoming an important specimen into the landing net. The split handle features a high density EVA butt grip, which plays an important role in controlling operations.

SPECTRA TROUT AREA

In the world of Trout Area, there exists a secret weapon known as Spectra: essential yet sophisticated, elegant yet powerful, meticulously crafted to deliver top-notch performance.

Its perfect parabolic action delicately protects the finest lines from the powerful reaction of big Rainbow Trout, allowing you to face every situation with confidence and precision. The CX-1 carbon structure offers an unprecedented fishing experience. Its special tubular tip is progressive and ultra-sensitive, perfectly accompanying the swimming of spoons and micro cranks through the depths of the lakes. Its beauty is further enhanced by fantastic single-legged rings, which are light and delicate. The full EVA handle, with engraved Rapture logo, plays an important role in controlling operations. With this rod, immersing yourself in the tranquility of the lakes and welcoming a big catch in the landing net becomes an unforgettable experience.

AERIAL *Bottom*

AERIAL BOTTOM

Bottom is the new frontier of the Area Trout world. When the Trout are stationary on the bottom and not at all aggressive, it's necessary to reach and stimulate them with specific lures, which the user must be able to drive with high precision.

For this reason the rod must respond exactly to the impulses dictated by the wrist, transferring them to the lure and receiving the return information, without dispersion. Compared to the standards for specific Area Trout rods, the blank of Bottom rods must maintain the classic sweetness of the curve in the upper part, while its body must offer superior reactivity. This happens magically in the Aerial Bottom, thanks to the physical properties of the High Modulus CX4 carbon and to the advanced geometric configuration, which provides a long top section ending with a solid carbon tip, jointed by a spigot to a short butt section with extreme taper design (High Vibe Handle). In a context of unrivalled lightness and balance, the tool excels in the management of Bottom class spoons, but is equally at ease with the small jigs and fine Vibe of the Chibi Lures family, able to visit the bottom of the lakes in search of Trout and Perch.

SICHD GUIDES **CX NANO** CARBON **HPR** **HIGH VIBE (HV) HANDLE**

High leg SiC guides, with K profile frame, with a stainless steel ultralight frame.

The butt section is a high technology key element and the special reel seat is ideal to feel all the vibrations produced by the lure.

DRONE BX BOTTOM

The Drone BX Bottom series is specifically designed for Bottom spoon's handling, this series is characterized by a peculiar sharpness of the body and by the sweet action of the top.

The perfect continuity of the curve is guaranteed by the innovative CX joint, which flexes together with the rest of the blank, creating the optimal collaboration between the two parts. So the slightest message from the lure arrives neat and clear to the user's hand, who can react with a positive strike. The young and sporty cosmetic, the perfect balance and the great ease of handling make Drone BX Bottom an ideal tool for competition in the Area Trout environment.

Exclusive flexible joint which improves the action curve's perfection and dampens oscillations.

High leg SiC guides, with K profile frame, perfect for ultrafine braided lines.

Special solid carbon tip for high sensitivity, able to cast superlight lures like bottom and vibe.

Essential ergonomic reel seat, built around a nice Woven Carbon body.

LINES

XPS ULTRA STRONG FC403

50 m

403 is the number on his identity card. The first two digits are simply fantastic, because they mean that the new, amazing generation of Trabucco Fluorocarbon offers 40% more knot strength than any other. The last one stands for the 3 levels that compose its structure, referring to the same number of specific responsibilities. The exceptional softness of these fluorocarbon lines makes them easy to handle, improves bait presentation, reduces the risk of tangles, and dramatically increases knot strength.

- Hi-Tech Fluorocarbon 100%, with three layer structure.
- Knot strength 40% higher than the best fluorocarbons.
- Unprecedented softness and sensitivity.
- Invisible, abrasion resistant, waterproof.
- Ultra-Slim spool with soft elastic band to keep the line in place.
- Colour: transparent

Ø 0.185 mm / 3.45 kg / 7.61 lb

AREA TROUT POLYESTER LINE

200 m

With tiny lures such as ultralight spoons, one of the main problems is lack of sensitivity, as contact with them is affected by line's behaviour. Braided lines are the most sensitive around, but they tend to float, so, once in water, the alignment between rod's tip and lure is never straight. Problem definitely solved with Rapture's Polyester Line! While braid traces an arc in the water, polyester goes straight from rod's tip to the spoon, thus offering higher sensitivity.

- Ultra low stretch for easy bite detection
- High specific gravity makes it sinking
- Very supple and memory free
- Flows smoothly through rod's guides
- A paper label marks the 100 m length

LINEUP

Ø 0.101 mm / 1.043 kg / 2.30 lb

Ø 0.112 mm / 1.134 kg / 2.50 lb

Ø 0.148 mm / 1.497 kg / 3.30 lb

DYNA TEX ULG BRAID

100 m / 110 yds

It flows smoothly and silently through the rod's guides, taking the lure beyond the expected spot. It sends and receives all the signals that lead to the predator's attack, increasing the overall level of your fishing action. Thanks to its intrinsic qualities, it wins the trust of all anglers. It offers an incredible combination of compactness and smoothness, the first guarantees breaking strength and the latter the correct presentation of the lure. This is thanks to the Japanese technology used to weave the HMPE fibres, giving them a circular and smooth cross-section.

- Dyna Tex high modulus P.E. fiber (HMPE)
- High cast performance
- High abrasion resistance
- Superior knot strength
- Super soft
- Hyper sensitive
- Super round
- More compact
- No reel memory
- Japan Technology

AREA SPOON

WINDEX

Windex spoons have been carefully designed and tested to always be effective. Windex Lures can easily be casted at long distance - even the smaller sizes - and they're able to work immediately, as soon as they touch the water surface. The colours have been chosen among the most appreciated in Italy and Europe, and are protected by a transparent film. Careful attention has been paid while choosing the hooks, always proportionate and of the highest quality, so you don't loose any of the fish that you have tricked.

ZERO

The smallest in the range, but still able to deliver great performances. Despite its weight offer good casting properties, while the peculiar shape slow down the lure's falls with a great rolling action. Perfect to fish for trout in the margins or in shallow water levels.

LINEUP

0.9 g / 19 mm / Hook #10

1.4 g / 20 mm / Hook #10

1.8 g / 25 mm / Hook #08

XONAR

Equipped with a single hook, strictly barbless, Xonar has been designed for Trout Area, but it's effective wherever an ultralight approach is worth. In the air, it takes advantage from the high weight/surface ratio to reach excellent distance or to overcome wind pressure; in the water, it falls slowly, swinging frantically, then keeps the swimming depth, thanks to the center of gravity moved towards the snap.

SYSMA

Sysma has been designed with computer assistance: it looks like a classic teardrop shape, but has two "shoulders" that slow down its fall and produce an inimitable sound. As a matter of fact, it sinks to the bottom at the same speed as the pellets used in breeding farms, something that the trout trust a lot, which makes the spoon very effective in the search of difficult fish during competitions, or through the spawning time, especially if it is used in slow go up and down near the bottom. All the colour variants belong to the Cluster class, sprayed to obtain absolutely random effects without causing any glare.

EDGE VIBE

Rapture Edge Vibe is a metal vibe for trout area bottom fishing, designed for competitions and not only. Its shape produces a tight wobbling action, making Edge Vibe a deadly attractive lure to fish for trout. It can be fished with a linear retrieve, exploring the water column simply by varying the retrieval speed, or for deeper water presentations you can alternate a steady retrieve by using your rod tip to make the lure rise and fall (YoYo Retrieve). It features 4 holes to attach the snap, so you get different swimming actions and depths. The flat belly allows it to stand on the bottom during stops, keeping the hook always raised from the bottom. Its high frequencies vibrate is ideal for stimulating even visibly inactive trout.

REAL SIZE

LINEUP

2.5 g / 24 mm / Hook #08 Barbles

MASTER BOTTOM

Spoon with an hexagonal drop shape, which must be made to work on the bottom with short calls and releases, to cause it to rise and fall. Trout's attack can occur in both phases, and is mainly caused by the vibrations produced by the sharp edges of the body. The latter has a relatively high weight, compared to the surface in plan, and its center of gravity is moved forward, for obvious ballistic reasons. Of course, color also plays an important role, and here the range is very rich, with UV solutions that can attract the attention of Trout from far distance or in low light.

1.6 g / 11 mm / Hook #08

HEXA BOTTOM MAG

Ideal for searching for trout on the bottom, to be carried out with more or less frequent recoveries and breaks, this spoon has an hexagonal plant and a certain thickness. When it descends to the bottom, it simulates a pellet, attracting fish because they are used to eat it. But its technical peculiarity consists in the magnet placed on back side, which keeps the hook facing upwards so as not to get stuck on the bottom and to ensure its pricking effectiveness. When the trout is hooked, the hook is released to achieve mobility.

REAL SIZE

LINEUP

1.3 g / 10 mm / Hook #08

LOOPY

Spoon designed for Area Trout but also good for Ultra Light fishing. Designed for deep fishing, performs like a light Bottom Spoon. Exclusive colours with glitter for advanced attraction.

LINEUP

1.5 g / 21 mm / Hooks #06 barbless & #08 Barbed

2.3 g / 24 mm / Hooks #06

3.5 g / 30 mm / Hooks #06

REAL SIZE

RYZER BOTTOM VIB

Specific spoon for bottom contact fishing, perfect for undermining apathetic trout with Bottom and Vertical fishing techniques. The single barbless hook is mounted on a ring to avoid getting snagged on the bottom. When the retrieve is deliberately interrupted, the Ryzer glides gently, undulating towards the bottom: if the Trout does not attack it in that phase, it does so during the next call that is made with the tip of the rod.

REAL SIZE

LINEUP

1.3 g / 18 mm / Hook #08

After watching dozens and dozens of spoon through water, Trout can not take it anymore, they seem to hibernate. They already know the catalogues of all existing brands, but they still would like to attack something substantial. Let's try a Diavel, the mini Rapture crank designed specifically for the signature fishing situations found in the Trout Area.

HARD LURES

DIAVEL

In the Area lakes it widens the range of catch opportunities, because it swims at relatively high depths and because the shape of its body is such as to allow a very slow retrieve, which proves to be very effective against indolent trout.

With its frenetic oscillations and its ability to swim up to 2 meters deep, this lure makes the difference; if we then consider the range of available colours, with the fantastic "cluster" versions with random dots on the lip, too, we have an idea of how many options we can offer to Trout. Of course, hooks are single barbless Powerpoint, featuring the 3D Cut point for good penetration and safe holding.

The large surface of the lip and the position of the connecting ring to the main line make the Diavel Deep sink quickly, just after the impact with the water's surface, and make it maintain a swimming bathymetric which, in most of the Area lakes, roughly corresponds to total depth. The very arched body's shape and its wide back make this crank swing frantically, even at low retrieve regimes, giving time to the apathetic Trout to stop it without wasting too much energy.

LINEUP

DIAVEL AREA CRANK

35 mm / 2.5 g / Action: Sinking / Running Depth: Variable
Single Hooks: #08 S-31BL Barbless

DIAVEL DEEP AREA CRANK

35 mm / 2.2 g / Action: Floating / Running Depth: 0.50 - 1.50 m
Single Hooks: #08 S-31BL Barbless

HOT BUZZ

This small and sinking crankbait features an unrivalled erratic action, perfect when predator fish is not so much active. The wide range of colours and their shape, which perfectly imitate natural prey fish, make it a perfect lure through the whole fishing season.

LINEUP

25 mm / 3.0 g / Action: Sinking / Running Depth: 0-0.5 m
Treble #12 Black Nickel / Single #08 Black Nickel

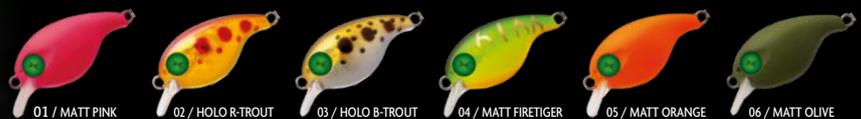

CHIBI LURES

ちび

CRANK

This small floating crank looks like a little gem. It is made from an extremely hard polymeric plastic material and is carefully painted with high visibility colours. The final look is so nice that we are sure it will become a kind of collectable item, even though it's tremendously effective once in action. The Chibi Crank is equipped with chemically sharpened Powerpoint barbless single hook and thus can be used in reservoirs too. This is the perfect lure to search the trouts in the shallower waters of lake's margins.

LINEUP

28 mm / 1.8 g / Action: Floating / Running Depth: 0-0.5 m
Hook: #8 Black Nickel Barbless

RYOKO CRANK

Small sinking rounded crank for shallow still water fishing. Amazingly effective with trout, chub, perch and black bass. Best performing with slow retrieve, stop and go and some jerking. In this way predators are attracted by what they think to be a wounded fry. The relatively small weight allows a very realistic sinking action.

LINEUP

45 mm / 4.0 g / Action: Sinking / Running Depth: 0-0.8 m
Treble #10 Black Nickel / Single #08 Black Nickel

BEETLE AREA

The Beetle is the imitation of a terrestrial, that is a bug that can occasionally fall into water and become trout food. The colors are natural or partially altered to surprise the fish. The lip of the beetle will be useful both if you want to retrieve it steady or if you want it to swim more erratically.

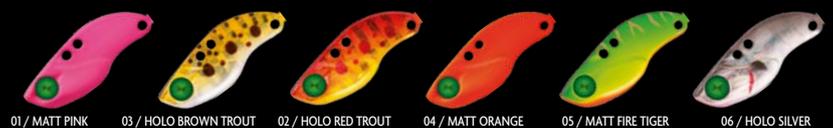

LINEUP

28 mm / 2.0 g / Action: Floating / Running Depth: 0-0.3 m
Treble #12 Black Nickel / Single #08 Black Nickel

VIBER

The Viber is an atypical lure and cannot fit the standard classification, being not exactly a vibration lure, nor a minnow and not even a spoon. We can define it a moving colour element that can surprise the predators when used close to the bottom. The body is a flat slice of lead that has been painted in bright colours and given two 3D eyes. This lure can be used choosing between two configurations, just moving the snap from one to the other of the two holes located on its back. We recommend to use the Viber for Area Trout, especially in deeper waters, where it can trigger the big ones to attack.

LINEUP

22 mm / 2.8 g / Action: Sinking / Running Depth: Variable
Hook: #8 Black Nickel Barbless

BOXES

ENDURANCE STORAGE SYSTEM

User's friendly, strong and superlight pocket lure boxes delivering extreme durability, designed to keep close at hand any small artificial bait. The infinite icon, included in the name, recalls the extreme durability of these nice boxes.

FOAM

Two models with an EVA bottom, an hook friendly material. Moreover, this shock-proof polycarbonate, designed according to the concept of Endurance, guarantees unlimited durability of the equipment even under intense use conditions, making it the perfect choice for anglers who seek reliable and durable gear.

SILICONE

Model with silicone bottom, on the surface of which there are dozens of triangular cavities, from the top of which a groove a few millimeters long starts; the hook must simply be inserted into that slot, pushing it gently. The softness and elasticity of the material will guarantee the right grip

LINEUP

Slit Foam / Size: 18.7 x 10.2 x h 1.6 cm

Triangle / Size: 18.7 x 10.2 x h 1.6 cm

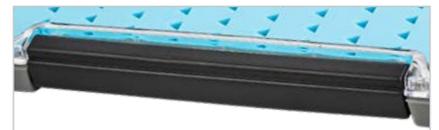

Silicone / Size: 18.7 x 10.2 x h 1.6 cm

Total waterproofness, thanks to the soft rubber perimetric gasket.

Triangular profile for quick hook attachment.

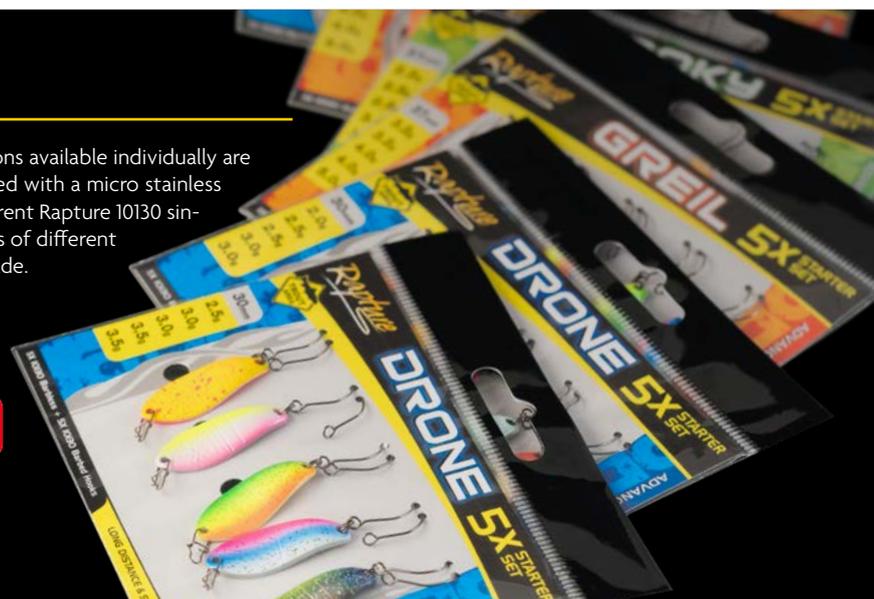

Single handed locking bar in a 16mm ultraslim profile.

AREA SPOON SET

Designed for Area Trout but also good for UL fishing. The same spoons available individually are now available in 'ready to go' sets for beginners. The spoons are fitted with a micro stainless steel snap, super safe and super light. Each spoon comes with 2 different Rapture 10130 single eyed hooks (1xBarbed + 1xBarbless). Each blister contains 5 spoons of different colours and weights, the weight of the spoon is engraved on the blade.

- Easy and ready to use
- Selected and approved by the Rapture team.
- Catch & Release Friendly
- Proven Effectiveness.
- Durable Materials.

ULG PRO BOX

Lightweight and practical, Rapture ULG Box are built with shockproof materials and designed for small lures. The inner foam is pre-cut to allow an easy placement for both single and treble hooks.

SIZE

AREABOX TACKLE SYSTEM

Super tough, but lightweight, Rapture AreaBox Tackle System are designed to store and carry your tackle in pinpoint conditions, whatever your fishing style and providing a comfy seat if needed. Aimed to contain the Rapture TekBox series.

- Including, two Rod Rack, an inner tray, and removable inner dividers
- Folding handle, also acting as lid support, once open
- Shallower room under the lid, for terminal tackle

The handle also converts into nice and reliable support for the lid, to create a wide table for lures and terminal tackle.

SIZE

43.5 x 23 x h 28 cm

ROD RACK 32

For any fishing style, the opportunity to keep the rods to hand and safely locked is invaluable. This important accessory does the job brilliantly. Made from sturdy ABS and Polycarbonate, it can be installed on both sides of the Area Box by an easy and quick clip. In order to match the rod's reel seat position, it can be adjusted in 2 different heights.

REEL'S FITTINGS

The top end of Rod Rack is shaped to accept reel's foot in four directions and keep the rod stable.

ADJUSTABLE HEIGHT
The Rod Racks can be applied to the box sides and adjusted in height under 2 steps, to match any different rod's reel seat's position.

SIZE

5 x 5 x h 32 cm

CUP & FOLDING CUP

It's useful to hold a bottle of drink or any other accessory such as pliers. It can be fixed on both sides of the Area Box, thanks to an easy clip.

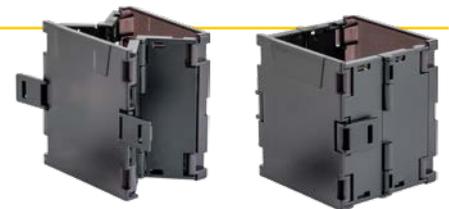

SIZE

8 x 8 x h 10 cm

SIZE

9 x 8.5 x h 10 cm

A folding version of above cup, it offers the advantage of being very compact once closed, so it can be brought on fishing site within the tackle box and opened only in case of need.

TEKBOX

Light, strong and practical: these are just a few specifications of Rapture TekBox tackle system, a wide and versatile range of items designed to store all your possible lures and terminal tackle.

- Made from high quality ABS, they are light, strong, shock-proof and able to withstand the elements
- Extremely versatile, they offer endless solutions
- Easy, safe and shower proof locking system
- Practical and customizable

LARGE

The larger version is available in 5 different models.

SIZE

25 x 16 x h 3.6 cm

LINEUP

100 cm / 40 in

AREA ROD STAND

Essential to transport Area Trout rods during the move around the lake, this rod stand provides great stability in any condition and slope of the ground. Two sections adjustable length aluminium legs, folding back to reduce the volume when storing it in the car's trunk. Main body made from shock-proof material. Three rod holding tubes, with slot to easily accept the reel's foot. Side designed to temporarily store lures which are not in use, but could be suddenly necessary. Hook for weight hanging in case extra stability is needed (i.e. in case of strong wind).

LINEUP

3 Rods / Legs Length 30-50 cm / Weight: 580 g

SPHERE LINE SCISSOR

Handy tool with an extremely compact and practical design that let you carry the scissor hanged to your vest without any obstruction or risk. With saw toothed stainless steel blades, the Rapture Sphere scissor will cut easily through braided line and regular mono, effortlessly without leaving any burrs. You can rotate the cover to use it in a conventional way or just pass the line through the slot in the cover to have a fast and neat cut.

HOOKS

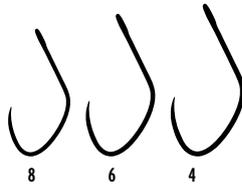

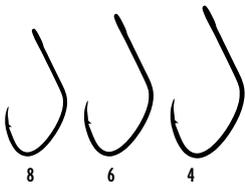

AREA GAME MASTER

REAL SIZE

Thanks to narrow gap and long beak point, it provides a wonderful hold, even without strike.

It's exactly same as the 10030, except for the point, which is barbless, now a must by rule in most trout lakes.

LINEUP

10130

10096 TROUT

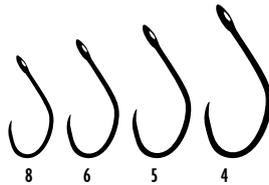

REAL SIZE

This hooks series is made to be used with spinners and spoon, the ultra sharp barbless point allows to set the hook easily in any situation, and the special shape avoid any unhooking problem during the fight.

LINEUP

Microbarb / Black Nickel

AREA PRO HOOK RELEASER

Rapture Measuring Zinger is the ideal accessory to link the Releaser to the angler's trousers.

A must for the serious Area Trout angler, this tool enables to quickly and safely remove the hook from trout's mouth without touching the fish. Thanks to very fine materials such as carbon and hi-density EVA, the Rapture solution is ultralight yet very stiff. The special head's design allows to release the Trout in two different ways, according to the direction taken by fish. In case the releaser drops in the water, it floats thanks to EVA grip and light weight carbon stem.

- Stainless Steel head
- Light and stiff reinforced Carbon stem
- Comfortable EVA floating handle grip, with finely engraved Rapture logo

AREA NETS

LIGHTWEIGHT AND PRACTICALITY AT HAND.

Wide range of nets designed for the Catch & Release of trout and other similar predators. The “Pe Latex Deep Rubber Mesh” respects the fish and avoid the lure to get tangle, ideal for Area Trout, offering lightness and practicality without compromising the safety of the caught fish.

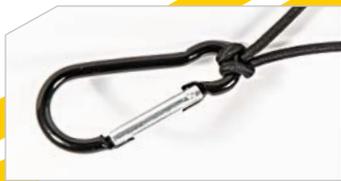

PRO RUBBA LANDING NET

LINEUP
