

Rapture

LmF

ABOUT POWER & ACTION

POWER

Each Rapture rod is classified according to its power, which is the power to cast a lure or the effort required to make the fish change direction and take the way of the landing net. Such value takes into account the conditions of employment and the style adopted in the fight.

ACTION

The action of the rod is the curve that it describes under stress, during the fight with a fish or at the moment of maximum load, through the casting. It depends on the materials used, the geometry of the blank and the components that complete it. Observing a rod in action, you notice the point from which it begins to flex: the more that point is close to the tip end, the more the rod has a rapid action, which can be defined as Fast or Extra Fast. If the bending starts from a lower point, the intermediate actions take place, gradually lighter until Regular and Slow. These variants determine the behaviour of the blank in relation to the lure that it is called upon to manage, and for this reason we identify it with the precise address of use.

The rods that start flexing close to the top (A) belong to the "Fast" class. The rods that mostly bend in the middle area (B) are considered "Slow"

RODS TECHNOLOGY

THE PROBLEM

In the Light Game fishing technique there is a frequent need to cast ultra-light lures, even under a gram of weight, which is why they are not able to exert great traction to extract the line from the reel. Furthermore, with the new techniques which see the use of very fine and soft braided lines, the risk of tangling around the guides is particularly high.

THE RAPTURE SOLUTION

Firstly, the guide's set exploits the well known anti-tangle properties of the K-frame. Secondly, it provides only two guides of relatively large diameter, followed by a series of very small single-foot guides, capable of controlling and managing the coils with excellent smoothness (Smooth Coil Cast System).

World quality Japanese components.

Smaller diameter blank in their category.

Corrosion free, strong and light frame. Fast heat dissipation.

P.F.A. TIP ACTION Power tip action for a proper management of fish fight.

Reinforced blank through a specific sized carbon layer.

Digitally controlled graphite layers.

Special Roll Core building, with strong solid carbon core and multi-layer High Modulus Carbon wrapping, bonded by nanometric resins.

Exclusive flexible joint, which perfectly follows the blank's curve and smoothes the oscillations.

The HPR concept (High Power Response), which gives the rod a greater speed of response of the top section during both cast and strike.

Special high-tech handle with the particular reel seat is ideal to let the user feel all vibrations coming from the lure.

High Resistance Carbon – Top reliability in every situation.

The new Japanese multidirectional, carbon cloth is able to offer tremendous performance.

Special torque-free structure to contrast torsion and develop high reactivity and casting accuracy (Ultimate Performance Blank).

Nanotechnology application to carbon. The most evolved fibers in the world.

CX-1 Carbon even lighter and stronger thanks to the Micro-Pitching process.

The purest super high modulus carbon for superior performance.

Area Pro Hook Releaser

A must for the serious Area Trout angler, this tool enables to quickly and safely remove the hook from trout's mouth without touching the fish. Thanks to very fine materials such as carbon and hi-density EVA, the Rapture solution is ultralight yet very stiff.

- Stainless Steel head
- Light and stiff reinforced Carbon stem
- Comfortable EVA handle grip, with finely xengraved Rapture logo
- Ring at the bottom end for Zinger connection

The special head's design allows to release the Trout in two different ways, according to the direction taken by fish. Rapture Measuring Zinger is the ideal accessory to link the Releaser to the angler's trousers (Item nr. 101-47-520).

In case the releaser drops in the water, it floats thanks to EVA grip and light weight carbon stem.

TITANIUM SiC GUIDES **SS** sea·guide® **CX NANO CARBON**

From the extreme lands of Southern America to the Japanese islands, getting through the heart of the Old Continent, the fashion of hunting for wild Trout, native to natural environments, has a timeless charm that also feeds with the pleasure of using equipment with refined and exclusive feeling. It is absolutely the case of these splendid Rapture creations, able to provide pleasure to the most sophisticated user even when the fish seem to have disappeared, thanks to the casting accuracy, to the high sensitivity and, last but not least, to the aesthetic taste. The blanks are made from high modulus CX Nano Carbon, a very fine material that allows to stratify the walls with a minimal incidence of resins, giving them an unrivalled responsiveness, which is appreciated in the execution of underarm or crossbow casts.

Iride

SIC HD GUIDES **SS SUPER SLIM BLANK** **CX1 MICRO-PITCH**

Iride series represents the perfect combination of lightness, sensitivity and aesthetic taste. A very thin CX-1 carbon blank, lightweight but resistant at the same time, allows you to have great feeling in any situation, casting very easily different types of lures like spoon, spinners, small minnows, soft lures and enhancing the slightest touch, thanks to his remarkable sensitivity. Due to these characteristics, it is equally at home in lakes and in the clear streams. The comfortable handle is entirely made from natural cork of the highest quality available; the reel seat, integrated into the handle, features satin metal hoods and is extremely light. Single leg SiC guides with vibration free Y-frame, ideal with braided lines, nylon monofilament and fluorocarbon.

SIC HD GUIDES SS SUPER SLIM BLANK CX NANO CARBON

Iride TRX Master UL

A perfect mix of technology and tradition in a wide range of rods designed for stream fishing, where the differences between a tool and another one require a high level of experience and skills to be appreciated. But the Iride TRX series is able to gratify even the enthusiast who chooses a single rod to deal with his favourite environments, relying on the advice of the trusted dealer. The choice must be calibrated not on the size of the fish of possible capture, which never represents a threat to the blanks structured from CX Nano Carbon, but on the type of lures normally used, with an eye to the required casting distances, because, for example, the lake environments usually require longer lengths and powers than running ones. With the special SiC guide configuration and the cooperation of the special thin diameter's tubular tips, the series is prepared to handle the braided lines, nowadays increasingly used in trout fishing.

**NATIVE STREAM SERIES
FRESHWATER RODS**

Fancy NS

SIC HD GUIDES SS SUPER SLIM BLANK CX1 CARBON MICRO-PITCH

It is the most powerful and longest among the Rapture Native Trout rods, with a casting capacity that shifts from "zero point" values to more substantial weight levels to face not only the streams, but also the upper parts of the rivers and lakes. With an environmental target of such importance, the Fancy Native required some measure at the project level, and so we equipped it with a front cork handle, long and shaped like a bell on top end to offer the thumb of the hand a firm contrast at the time of the casting execution, just like in the longest and most powerful fly rods.

Ambition

sea'guide SS SUPER SLIM BLANK CX1 CARBON MICRO-PITCH

Ambition is designed for Finesse fishing style techniques and in particular to enhance the bait control. To achieve the target, Rapture Team has been working hard and developed a unique action, starting from a fine solid tip to get the maximum sensitivity and down through the tip and the butt, built with a fast taper to progressively increase power without adding extra weight. This has been possible just using the latest rod building technologies and materials available, in fact Ambition is entirely made with the high modules CX-1 Micro Pitch Carbon.

Cloud LTX

Handiness, versatility, elegance in details for a series intended for a young audience, who practices different spinning techniques to never stop having fun. With the Cloud you can range from the silicone baits presented on jig head to the spoons, up to minnows weighing up to 7-8 grams: we are in the field of Light Game, something very exciting in the Street Fishing world, but also in traditional waters. In fact, it's almost impossible to blank, but it is not rare to meet important fish: Zander, Asp, Catfish of "human" size. Gorgeous handle, split in EVA and cork, with anatomical reel seat placed at relatively high position to provide enough lever for long casts.

Urban Fighter

SICHD GUIDES SS SUPER SLIM BLANK CXO CARBON MICRO-PITCH

More than a fishing technique, Street Fishing is a lifestyle based on simplicity and mobility, which is implemented with fast and reliable rods like the Urban Fighter. Built with CX-1 Micro Pitch Carbon, the butt section has been reinforced through special carbon clothes, to deliver lightness and sensitivity on the top end with the backbone necessary to have a perfect hook set and play action. The fast taper combined with the fine tip, let to fish both with hard and soft lures with ease, with the longer lengths perfect to keep in contact with light lures at distances.

Dogma

SICHD GUIDES CXO CARBON MICRO-PITCH

Comprehensive range designed for the most demanding street fisher, featuring superb lightweight and fast, yet forgiving blanks, to handle strong fish on light tackle! Dogma is able to handle with ease most of the lures used in street fishing, but the hyper sensitive solid tip part is ideally suited to soft baits at most, where bite can be tricky and sensitivity and control need to be always a paramount.

Invader

SICHD GUIDES SS SUPER SLIM BLANK CXO CARBON MICRO-PITCH

If you are looking for a modern design, super slim blank and very sensitive rod for your light spinning sessions, then you find the right one with the Invader. The fast action of this blank can cast at great distance small metal lures and jigs, getting to high precision standards. The blank, despite the light weight, is powerful enough to fight a big fish and to force it out of covers. The minimal reel seat is refined with woven carbon to increase the sensitivity. Just remember that ultra-light rods don't mean ultra-small fish! The Invader is ready for epic battles.

HPR HIGH VIBE HANDLE (HV) SIC HD GUIDES CX NANO CARBON

Aerial

A world of special sensations enclosed in just a few grams of carbon: Aerial is a new quality standard in the Finesse rod's segment. The asymmetrical two-section structure has a long top section with all the guides and a short handle with an unusual profile, connected by a spigot joint. A true communication media, able to activate the silicone lures under Dropshot, Wacky and Jighead style with braided lines, thanks to the assistance provided by the ultralight single-leg SiC guides.

Ecstasy

SICHD GUIDES SS SUPER SLIM BLANK CXO CARBON MICRO-PITCH

Ideal for all Finesse techniques, from Light Street Fishing to Rock Fishing, Ecstasy impresses with the lightness and reactivity of the thin tubular top. This is due to the Super Slim blank made from CX-1 Micro Pitch, a sophisticated high-modulus carbon cloth, with no surface lacquering to limit weight. The response to the wrist input is very prompt, while the very high sensitivity facilitates the cast of microscopic lures. The whole balance is perfect, thanks to the EVA handle profile that incorporates an ergonomic reel seat with a nice carbon screw knob. The long leg SiC guides feature a very stiff frame that doesn't vibrate when braided lines go up and down.

Envy

SICHD GUIDES SS SUPER SLIM BLANK CXO CARBON MICRO-PITCH

Envy represents the top of the range for Finesse fishing. Developed after long testing to achieve the best performances on long distance casting with ultra-light lures but retaining excellent sensitivity and control. To achieve this, we apply the latest tech and materials, from the CX-1 Micro Pitch Carbon, to completely eliminate the "spine" on the whole blank. Envy features spigot joint, slow taper construction, with an ultra-slim profile and a nice regular action, whilst the ultra-fine hollow tip is the optimum solution to fish both with hard and soft baits.

SICHD GUIDES SS SUPER SLIM BLANK CX-1 CARBON

Fire Wind

The Fire Wind has been designed for casting small lures at great distance. The key point to get this result is the fast action of the blanks, allowing to transmit a great amount of kinetic energy from the rod to the lure in a short time and space. Consequently, these rods are also perfect to face narrow streams or limited space waters. The long legs K frame SiC guides will reduce the friction with the line and greatly increase the casting distance while reducing the risk of line tangling. The EVA and cork handle is super comfortable and it is balancing the whole blank.

sea-guide® SS SUPER SLIM BLANK CX-1 CARBON MICRO-PITCH

Signal Master Sense

Signal Master Sense series is designed for finesse fishing, in particular to cast lightweight lures at distance with accuracy, such as fishing for asp where you need to cast and cast again. Signal is true allrounder, perfect to fish with hard baits or medium heavy drop-shot style for big fish, with an excellent balance and reliable tool. Entirely made with CX-1 Micro Pitch Carbon, the butt section has been reinforced to maintain the maximum lightness and sensitivity with the backbone necessary to have a perfect hook set and control to play with hard fighters. Signal Master Sense is fitted with quality components, the new long leg and anti-tangle K profile guides with SiC inserts are the best solution with braided, the guide combination between sizing and spacing eliminates wind knots, reducing line coils to allow for smooth and accurate casts. The handle grips are a mix of quality cork and eva.

sea-guide® SS SUPER SLIM BLANK CX-1 CARBON MICRO-PITCH

Signal Solid Sense

Signal Solid Sense are designed for finesse fishing, fitted with a fine solid tip as the name suggests, these rods are the ultimate solutions for drop-shot, split-shot, mojo and others light-game work with soft lures. The longer length is the ideal choice to keep in contact with light lures at distances fishing from the bank, while the shorter is ideally suited to fish from the boat. Thanks to its versatility, Signal can be used with hard and wire baits too. Entirely made with CX-1 Micro Pitch Carbon, the butt section has been reinforced through a special carbon reinforcement, to maintain the maximum lightness and sensitivity with the backbone necessary to have a perfect hook set and control to play with hard fighters. Signal Solid Sense is fitted with quality components. The handle grips are a mix of quality cork and eva to enhance feeling and comfort.

**TOURNAMENT & BASS
FRESHWATER RODS**

Xray Finesse & Racing

Oriented to competition, this high level single-section rod series has been developed in cooperation with the Rapture Team and world champion Marco Iseppi. Five models for spinning and four for casting to cover all the specific needs of Italian and European Bassmen. Every and each model has been independently designed for a single technique or for two similar techniques. We took maniac care of every and each detail to obtain one of the best rod for Pro Bass Anglers. The blanks, sensitive and reactive, are super reliable, standing the strongest stresses and strikes.

The new Japanese multi-directional SX-4 Nano-technology carbon cloth is able to offer tremendous performance, enhancing the casting accuracy and playing action. To build them, Rapture in cooperation with Toray®, developed a special Carbon tissue named SX4 Carbon Cloth – Nano Technology. This material is made of the purest high modulus carbon fibres, bonded by the a small quantity of resins, and molecularly woven to create a sort of wrapping tissue where fibres are positioned at 45° and 135°. This peculiar positioning at given angles is able to distribute the stress and loads along the whole surface of the blank, making the rod strongest than ever.

► FINESSE - DROP & SPLIT SHOT

Specific for search fishing with Drop Shot and Split Shot style, it offers a very fast body and sensitive top, to never miss the contact with the bait.

► FINESSE – SHAKY HEAD & MOJO

It's able to handle the pressure generated by large baits, such as Shaky Head and Mojo, without sacrificing the ability to receive signals from the bottom.

	MODEL		ACT	PWR					
126-07-500	S66 Finesse Drop & Split Shot	1.98 m	1	XF	ML	1/8 – 1/2 oz	6-12 lb	9	KLH Micro SiC

► RACING - FINESSE & TUBE

Accurately drives the Soft Baits - such as Worm and Tube - through the most intricate covers, but it is always ready for quick strikes even in topwater.

► RACING – WACKY STICK

Ideal for Bass and Pike with Wacky technique, it controls the bait from the first contact with the water, enhancing the slightest signal of attack.

► RACING – MAG WORM

Developed to fish with Worm, Creatures and large Jig under covers, it stands out of the crowd for the powerful body and great tip sensitivity.

SICHD GUIDES **CX-1** CARBON MICRO-PITCH

Finezza RV

Wonderful series of rods that are very likely the best you can get for specialist light fishing techniques. With Finezza RV you can use micro jigs or spoons, drop shot or split shot rigs. Every single aspect of these rods is meant to be used Finesse style. We choose to go for a so important light fishing family because it is more and more evident that a too heavy approach to fish is not the correct way for success. Light fishing is sometimes the only way to get the big ones! To get the premium performance of the Finezza series, that we offer in 3 versions for spinning and 3 for casting, we used the Super High Modulus CX-1 Micro Pitch Carbon, whose main feature is the superfine fibres, distributed in a way that easily distributes uniformly the load. Finally we used high-cone Profile SiC guides for a safe use of braided lines.

	MODEL	Length	Sections	ACT	PWR	Wt	Tip	Line	Reel	Guide

SICHD GUIDES **CX-1** CARBON

Artista

Artista rods are absolute masterpieces in the spinning and casting competition market, even if they wink to extra esigent Bass Fishing market. Ten one piece models (three spinning and seven casting) with Fast or Medium Fast actions to get the best performance from the extraordinary carbon fibres we used to build them: the CX-1 High Modulus Carbon. Every model is sacred to a specific technique, in some case two, and every model has been designed and crafted exactly for that technique. This time consuming job has been done by the whole Rapture Team. We are also proud of the colourful cosmetic that allows to identify one of the most beautiful Rapture rods wherever in the world. The SiC guides allow the use of braided lines. The handle is split and it is made on high density EVA for the best comfort.

► SHAKY HEAD/SENKO

Quick but sensitive at the top to perceive every vibration, it is designed for fishing with the shaky head technique with soft baits and worms.

► FOOTBALL JIG BIG WORM

Dedicated to jig fishing enthusiasts, it is fast and powerful, also excellent in handling large silicone baits such as worms and creatures.

► DROP SHOT & SPLIT SHOT

Specific rod for the techniques of drop shot and split shot, characterized by medium fast action to feel even the slightest vibration of the bait.

	MODEL	Length	Sections	ACT	PWR	Wt	Tip	Line	Reel	Guide
124-86-510	M/S1-72 Shaky Head/Senko	2.18 m	1	F	ML	1/8-3/8 oz	6-15 lb	13		LH Micro SiC

► SENKO 'N' FROGS

Fast action rod, essential to react to sudden attacks while topwater fishing with worms, imitations of mouse and frogs.

► SPINNERBAIT 'N' WORM

Perfect for reaction baits: spinnerbait, chatterbait or buzzbait, with medium fast action to absorb the stress of the strikes at short distance.

► JIG 'N' WORMT

Developed for jig fishing, it is also very well suited to the use of texas rigged baits destined to fool predators in the covers.

► SWIMBAIT 'N' CAROLINA RIG

Medium fast action to manage swimbaits, either soft or hard; recommended for predator's search with Carolina Rig technique.

► PITCHIN' STICK

Very fast action, it is useful both with silicon lures and with jigs, working close to structures or covers with the pitching technique.

► FLIPPIN' & PITCHIN'

Ideal for the use of Cover Jig and Heavy Texas rigs, thanks to its Heavy power it is considered the "bad rod" of the Rapture range.

► CRANK BAIT

Specific for Cranking, it has a tapered body for long distance casting and develops a sweet action that limits the risk of losing fish.

Wivern

Sitting on top of the Rapture range, Wivern rods are specially designed for the most careful and demanding angler, who understands the great advantages of one-piece structure, knows the performances of High Modulus carbon and appreciates the quality of Fuji original components. Three impressive casting models, developed around a super slim super high modulus CX1 carbon blank, carefully designed to have rapid action. Guides are genuine Fuji SiC K frame, spaced as specified by the KR Concept protocol by Fuji to draw the best qualities from the blank and maximize its power. The reel seat is genuine Fuji too, made from nylon and graphite, which allows a great contact with the blank and superior ergonomic.

► **COBRA**

Perfect for Jerk, Spinnerbait, Poppers, WTD and Frogs with limited weight.

► **REQUIEM**

Born for delicate presentation, both with pitching style and with reaction baits.

► **TORQUE**

Developed to manage the largest soft lures or even heavy texas rigs.

Firelord

Technically advanced rods destined to Hardbaits and Soft Baits handling. Blanks made from SX4 Nano Carbon with tubular top; butt section wrapped by crossed carbon bands (CXC Carbon) to contrast torsion and develop high reactivity and casting accuracy (Ultimate Performance Blank). Split handle with EVA butt grip and laser engraved Rapture logo. Ultralight Seaguide SiC-RS single leg guides, ideal for braided lines. Special low profile Fuji original reel seat, with satin steel moving hood; designed with a long fore grip flattened on upper side to offer great casting and fighting control.

**ALLROUND SPINNING
FRESHWATER RODS**

Flit Master

They belong to the fantastic world of Hyper Custom, the olympus of the most exclusive rods for the general quality characteristics but also for the special sensations they offer, beyond the tremendous fishing effectiveness. They have been created starting from blanks with extraordinary properties of reaction to stress and with an incredible level of sensitivity, which arise from the infinitesimal incidence of resins between the several layers of carbon fabric. This structure can be compared to the body of an athlete, where the muscles prevail over fat for a ratio of ninety-nine to one! In the final phase of the blank construction a level of crossed carbon bands has been added, extending from the butt end up to about 30 centimetres above the reel seat. A real power chamber that releases the force needed to cast and counteracts the torsion to increase its accuracy.

Assassin MXT Power Mag Stick

2 Sections medium length spinning rod whose stiff blank, powerful but sensitive, is perfect for Mort Manié (dead fish) and drop shot, to chase fishes suspending on the bottom. The action is medium fast and allows to force the prey outside heavy cover. Perfect balancer. The Assassin MXT is equipped with SiC guides, so braided lines can be used without any problem, and prime grade EVA quality handle.

Volmoon

Extra Fast and Fast models. The design of Volmoon required a really long time because it was our intention, and we believe to have succeeded, to build a series of rod that could be used fishing from the shore as well as from belly. We are really happy because we managed to reduce the distance between the butt cap and the reel seat, maintaining a balanced action. In this way you can easily use the rod from the belly, while the handle also suits the cast from shore. You can use in a number of situations, from trout fishing in river to black bass of course.

Inova

Inova spinning rods are really well balanced and made of a special material named Nano Carbon, very light, powerful and resistant. Handles are made of first quality natural cork and the blanks are equipped with SiC guides, so you can fish with braided lines with no worries. The capacity of heat dispersion of SiC material allows long fights with big fish without any risk to break the line. Can be also used in salt water conditions.

SICHD GUIDES CX-1 CARBON

Extremely nice and compact telescopic rods, which find room in any backpack to tackle mountain canals and streams. The CX-1 High Modulus carbon structure includes a sensitive solid carbon tip with a sliding guide. The SiC rings feature a minimal metal frame creating a super compact guide set, which is also self-protecting against accidental impacts, as the tip is completely hidden inside the other sections. The ergonomic reel seat has a steel hood regulated by an elegant woven-carbon knob.

Insidia Seabass Specialist

One of the most exciting branches of saltwater spinning, dominated by the Sea Bass fashion but also warmed up by the screaming runs of Bluefish and Leerfish, gets special attentions from Rapture Team. The real experiences lived on Italian coasts have been put on the table to create technical rods, whose casting power ranges from the heavy Rocket Jigs to the ultralight Power Minnows fitted on jig heads. Two super light and easy to use models that are able to cast every lure, even the smallest, at great distance, over the big waves where the schools of minnows try to find shelter. The extremely balanced and slim blank is made in two equal sections, jointed by a woven carbon spigot. The Insidia Sea Bass is made of CX-1 Micro Pitch Carbon, a more reliable and reactive fiber than ordinary High Modulus. Genuine Fuji guides and reel seat. The Insidia is ready for epic battles.

Horizon Progressive

**CX-1
CARBON** Fuji

Horizon Progressive can cast longer and more accurately, even in windy conditions, thanks to the fast action of the blank and to the small sized guides. The CX-1 Carbon blank is resistant and reliable, allowing safe retrieves of big fish. It is equipped with genuine Fuji IPS reel seat and ergonomic reel seat, integrated in the EVA handle grip, to guarantee a good grip and comfort without renounce to sensitivity. Horizon Progressive is fitted with high quality low frame salt water proof guides. The whole series is so suitable for salt water fishing, from low cliffs or river's mouths. Attention to details, the stylish cap with Rapture logo, while the rubber edge protect the handle over time from scratches and damages. Horizon rods perfectly matches with long jerks.

Ocean Blast

We have designed three different rods, each one with a precise destination of use but all with the best possible structure, which is made of an offset butt handle, plus a long top section carrying all guides.

► LONG JERK & SOFT LURE

Rod dedicated to fishing for small predators; such as Sea Bass, Bluefish, Mackerel and Little Tunny, using jerk bait and silicone lures on jig heads.

► HEAVY JERK & STICKBAIT

Specific model designed for light popping, it is also excellent with large jerk and stick bait in search of Bluefish, Barracuda, Little Tunny and Frigate Tuna.

► SHORE JIG & SURFACE GAME

Designed for Topwater with Popper and WTD, but equally good for shore jigging. Suitable for long fights with Bluefish, Small Tuna, Lichia and Barracuda.

CX NANO CARBON

Tide Way

The reel seat position, rather high, suggests that this series is born for sea spinning from the shore, while the one-piece construction, with detachable handle, guarantees a perfect action, without dead spots and extremely robust. Perfect tool for Seabass, Pompanos, Bluefish, Barracuda, to be challenged with hard lures (minnow, jerk, lipless, metal jigs) just after a storm, where the fast action allows an excellent sensitivity and fast reaction strikes. The Fuji K-Alconite deletes the risk of line tangle, allowing the use of particularly soft braided lines. The original Fuji reel seat is a must on tools of this quality. Spigot joint is finely made from long lasting Woven carbon.

TWB THICK WALL BLANK DESIGN **PFA.TIP** ACTION **SIC HD** GUIDES **CX NANO** CARBON

The offset joint blanks make good use of the TWB (Thick Wall Blank) technology, combining the CX-1 Micro Pitch carbon with different carbon layers to get a progressive action with a great sensitivity and the backbone necessary to counteract strong fighters. The heavier action is fitted with rubber gimbal cap, to fight big preys with belt. Guides are light yet strong, with anti-tangle and corrosion resistant frame and with genuine SiC rings totally braided proof and designed to dramatically reduce wind-knots. The under-wrapping avoid the guide touching the blank when in action, to increase resistance and durability. The long and ergonomic front grip is made by high density Hypalon, a great material able to offer a tight hold in all conditions.

Ignition

For the size of the targeted fish and the emotions it can offer, offshore spinning is perhaps the most exciting segment in the world of sport fishing. The specialists who practice it have a fine taste, very clear ideas and, in terms of rods, express special needs that Rapture has been able to understand and transfer into the Ignition rod project. On the butt section you read "Saltwater Master Build": it means that the Ignition are born on the sea to give the best in every circumstance. At the risk of casting tangles, not uncommon with braided lines, they put an end with Fuji K guides, fixed with double wrappings to avoid contact with the blank, when its bend speeds up the heartbeat. To the challenge engaged by a running predator they respond with the SX4 Nano Tech carbon structure, able to impose itself with an exceptional linear strength. At sudden changes of direction, including the dreadful passages under the boat, they cope with surface fiber's weaving, crossed at 45° to dissipate stress along the blank.

The new Japanese multi-directional SX-4 Nano-technology carbon cloth is able to offer tremendous performance, enhancing the casting accuracy and playing action. To build them, Rapture in cooperation with Toray®, developed a special Carbon tissue named SX4 Carbon Cloth – Nano Technology. This material is made of the purest high modulus carbon fibres, bonded by the a small quantity of resins, and molecularly woven to create a sort of wrapping tissue where fibres are positioned at 45° and 135°. This peculiar positioning at given angles is able to distribute the stress and loads along the whole surface of the blank.

► IGNITION SPIN MASTER

You'll not believe how lightweight yet strong a Spin Master is, until you try it! At ease from shore and boat game as well, it's the perfect tool to deal with jerk, plugs and jigs, thanks to the fast taper blank delivering extra sensitivity and with the backbone to withstand the strongest fighter. Main target is the big bluefish and other medium sized predators.

► IGNITION SURFACE JERKER

When the going gets tough, Surface Jerker gets going! Medium taper blanks, extremely lightweight yet powerful and designed to hunt for big pelagic predators on the surface levels, casting heavyweight stickbaits, WTD or Jigs at great distance with ease. Perfect for tuna offshore game or even leerfish, amberjack and many more.

► IGNITION JERK & POPPING

If you need to take the game to a next level that's the rod you need! Features a medium-taper blank with a huge backbone to play strong fighters, but unbelievable lightweight to let you cast with ease. The action is simply perfect to cast and retrieve big WTD or poppers, in the Mediterranean sea for redfin tuna or equally at home at tropical latitudes for GT.

**OFFSHORE SPECIALIST
SALTWATER RODS**

Engage

Comprehensive rod's series designed and built to face extreme pulls in the offshore spinning, with a focus on the user, who needs lightweight tools to resist many hours of fishing from the boat. The blank is a single piece of High Modulus Carbon Nano CX, with walls of particular thickness (Thick Wall Design), which is grafted on detachable butt, covered with high density EVA with rubber knob at its bottom to push it to the groin during the lengthy battles. SiC double leg guides, with the first fitted upside down to avoid line tangles during the execution of the faster casts.

Gulfstream Rocket Tuna

The blanks are designed to deal with the small bait aimed for tunas, being able to cast them to horizon but with a fine tuned tip section to offers enough sensibility to feel and work the lures, delivering a great backbone power for hardest fights with big bonus fish. This has been possible just using the latest rod building technologies, as the TWB (Thick Wall Blank) technology, combined to the trusted and performing CX-1 Micro Pitch carbon, with the woven carbon reinforced offset joint part. Anti-tangle and corrosion resistant guides with genuine SiC rings totally braided proof and designed to dramatically reduce wind-knots. The under-wrappings avoid the guide touching the blank under extreme loads, to increase resistance and durability. The long and ergonomic front grip is made by high density Hypalon, a great material able to offer a tight hold in all conditions.

Ocean Vib Bluefin

The Ocean Vib Bluefin are designed to target feeding frenzy Bluefin tunas, as well as other pelagic predators such as leerfish, dolphinfish, amberjack and barracuda just to name few. The lighter actions are perfect to deal with stick baits, pencil, jig and popper, featuring a sensitive tip able to let you cast and retrieve light lure holding a perfect control even at extreme distances. While the more powerful 8' is designed for "Big Cup Head" poppers, that require a rod that is not only able to cast them but also to retrieve them! Latest technologies has been used for processing, with super slim blanks built with the trusted CX-Nano Carbon with Thick Wall Blank process, woven carbon reinforced offset joints and genuine Fuji components.

Giant Run Popping

The pressure generated by large Poppers in their typical walk on the water's surface is little more than a tickle for these powerful tools. In fact, while showing a relatively fine profile, the Giant Run Popping belong to the category of "extreme measures", thanks to a blank made from CX Nano Carbon completely wrapped by carbon bands which counteract the deformations under load, effectively protecting it from sudden breakages. The SiC guides are all double-leg models, mounted on double wrappings to prevent their feet from coming into contact with the carbon of the blank, causing dangerous abrasions just when it is stretched to the maximum. The biggest one is fitted upside down to reduce the risk of line tangles during the cast. The handle grip is made by high density EVA and ends with a gimbal butt; the strong reel seat is made of steel and graphite.

**SPECIAL TRAVEL
SALTWATER RODS**

Pacific

CX NANO CARBON

In the Mediterranean, as well as in the tropical seas, this series hunts for large marine predators, from shore or boat: Lichia Amia, Barracuda, Jackfish, JT, attacking large jerk, popper or metal jigs retrieved at high speed. To cope with such pressure, the Pacific Saltwater is made from highest quality carbon with nano-technology texture, which develops an enormous power despite the blank's thinness. The spigot joints are made from woven carbon, a highly wear-resistant material. The beautiful details "tone sur tone" catch the eye, but are the Fuji components - from the integrated reel seat to the K-Alconite guides - which provide substance beyond appearance.

Bayseeker

CX NANO CARBON

Series with compact configuration, consisting of two models with different action, ideal for spinning to Seabass, Pompanos, Sea Bream, Horse Mackerel. The Medium 7' is born to hunt for small-medium sized predators from shore or boat, with large reserve of power in case it was necessary to cast further or to fight with unexpected bonus fish; the Medium Light 7'2" is designed for shore fishing with small lures, soft or hard. Both can provide great fun in case of Mackerel spinning from the boat, with metal jigs. Beautiful cosmetics, with elegant "tone sur tone" finish which complement the high quality Fuji components.

Tidal Master EGI

It is the most refined of the Rapture Egi rods, with a sweeter action in the upper part that allows to use thin braided lines, as well as reducing the risk of losing catches when the cephalopod attack occurs at short distance from the bank. But its CX Nano Carbon structure is completely wrapped with carbon bands, which, in addition to protecting it from accidental shocks, give it that remarkable responsiveness that helps casting, even in adverse conditions. A diamond weaving, located just above the fore grip, performs the task of dampening the torque, thus improving casting distance and accuracy. The guides are the super-reliable and stiff Sea Guide SiC with long leg K frame, while the graphite reel seat, embedded in the EVA grip, is complemented by a beautiful carbon knob.

SS SUPER SLIM BLANK | S sea-guide® | CX1 CARBON MICRO-PITCH

Rip Tide

Since the fishing line is mostly made of PE, a braided line devoid of any elasticity, the rod must absorb their fight, which is always quite energetic; here comes the structure of CX-1 Micro-Pitch high modulus carbon, . A great power lies in the butt section, useful to face the typical problem of slack line caused by adverse wind conditions. Starting from the bottom, up to a certain point above the reel seat, the handle is reinforced by crossed bands of carbon, just to upload power and return it for the projection of the jig at a great distance. The EVA split handle has a conical butt grip for perfect control and a fore grip that incorporates the low profile Rapture reel seat. Guides are long leg SiC quality.

SS SUPER SLIM BLANK | S sea-guide® | CX1 CARBON MICRO-PITCH

Outlaw RCX

Thoroughly tested by Rapture experts in the Mediterranean, this rod series is openly dedicated to Eging, a branch of spinning which targets Cephalopods and that is getting increasingly popular. The Outlaw have a wider and lighter scope, ranging from Egi # 2.0 to # 3.5. Reactivity and reliability are the credentials of the CX-1 Micro Pitch High Modulus carbon blank, which is further reinforced by carbon crossed bands in the handle area. The EVA splitted handle grip provides great comfort and cast control, and incorporates the Rapture graphite screw reel seat. The guides are long-legs type with SiC inner ring, and are suitable for braided lines use.

LIGHT ROCK FISHING
SALTWATER RODS

Vivid

SS SUPER SLIM BLANK SIC HD GUIDES

Designed for ultra light and light rock fishing. The stiff blank, together with a solid carbon tip, are a perfect combination for "feeling" the lures you are using. We specially recommend the Vivid when fishing with small jig heads and soft baits, because you can really have a clear perception of the bottom design and the possibility to transmit great action to the lure. For salt water light rock fishing we suggest to use the micro jig head in combination with the soft Mebaru Worms from Rapture for maximum efficacy. Equipped with SIC guides and ergonomic EVA split handle.

Find out more
on page 116

The Light Rock Fishing is a technique that can be practiced anywhere there is salt water, even in the absence of rocks. It was born in Japan but it is becoming a real Life Style in Southern Europe. In rocky or weedy environments, you can catch comber, wrasse, sea bream and of course the Mebaru, or scorpionfish, the fish that in Japan gave its name to the technique.

Reels Technologies

Super Balance System

This new technology is obtained just using the latest computers 3D softwares, which allow the designing and later the construction of perfectly balanced rotors without the addition of external weights.

POWERBAIL

In several models, we introduced an aluminum tubular bail that has a larger diameter than traditional ones. Although thicker, these new bails are lighter, stronger and more durable than traditional, solid ones. Thanks to the special shaped connection, it sweetly drives the line to the roller, even when the line itself has no tension at all.

The conventional line rollers, at every turn of the handle, force the line to twist on itself, causing annoying tangles. The Anti-Twist Line Roller dramatically reduces the line twist problem and reduces the wearing of your line.

Easy Cast technology is a massive breakthrough in reels development, developed using an hybrid braking system combining a 6-way magnetic brake to a 6-way centrifugal brake, to deliver a whopping 36 drag combination to allow anglers fine-tuning and drastically reduce the "backlash" effect. The centrifugal brake acts positively in the initial stages of the cast, when the high rotation speed releases a greater centrifugal force, thus to allow a smooth releases of energy. While the externally adjustable magnetic cast control system allows for fine adjustment on the waater and it works in a complementary way, by adjusting the spool rotation just in the final stages, when centrifugal forces are lesser due to the friction and allowing a more accurate and precise placing. Easy Cast System do not reduce only the tangles when casting, but thanks to a better friction control is able to deliver longer and more accurate casts!

ANTI VIBRO SYSTEM

We gave our designers the challenge to minimize or even cancel the vibrations emitted by reels during the recovery phase. Thanks to the new 3D software, they have been able to design well balanced rotors (Super Balance System) but for top range reels we wanted something more. We focused on the stabilization of the gears and the subsequent cancellation of the plays that swing the spool. The result is excellent, the pinion holds the spool firmly on its axis and this does not oscillate even when drag is in traction. We are particularly pleased with the results ... You just have to try.

Antireverse system in use in most reels. Thanks to a lever usually located above or below reel body, you can plug or unplug the operation of the one-way roller bearing that locks the rotor. When the antireverse is inserted it's always in direct bearing on the mechanics (fluidity) and can just turn the handle onwards just by winding lines; when it is stationary, it can also turn the handle backwards and release the line.

With this revolutionary system, the rotor turns at a very high speed while the spool makes its turn up and down at a slower speed. This action delivers perfect parallel winding, thereby avoiding the line tension from normal spooling movements and therefore making longer casting easily possible.

The line lay is very tidy with Cross Winder, providing good casting distance and reducing the possibility of tangles. In fact, the "X" spooling compacts the line and allows a better distribution of the coils, enabling to fulfill the spool up to the upper lip. This system is compatible with the use of both monofilaments and braided lines.

SPINNING REELS

SX1

- 7 SS Long Life Ball Bearing
- 1 Stainless Steel Roller Bearing
- Infinite Anti Reverse «One Way» System
- X-Tra Tough Body
- AVS Rotary Flat Oscillation System
- V-Shaped Rotor
- X-Light Hybrid Aluminium/Carbon Handle
- EVA ergonomic handle knob
- X-Light Hybrid Aluminium/Carbon Spool
- Braided Concept Hybrid Aluminium/Carbon Spool
- Front Drag System with Sealed Ptfе Coated Drag Washers
- AS Anti Twist Line Roller
- Powerbail

Entirely designed in Japan with the latest 3D software, it's packed full of the latest technology, all enclosed in a X-Tra Tough body extremely lightweight but strong at the same time to eliminate any vibration. The LLG gears are fitted on 7 S.S Long Life Japanese ball bearings, combined with 1 Roller Bearing running the one way clutch. The V-Shaped rotor is assisted by the IRSS system to prevent accidental bail closure, whilst the the PowerBail, lighter and stronger than conventional bail arms, helps the overall balance. SX-1 is supplied with two spools, both introducing the new Hybrid concept, engineered in a blend of aluminium and woven carbon to reduce weights without compromise the strength. The spools are supplied in two different versions: the X-Light one is a conventional aluminium-core spool, extremely light and designed to be used with monofilaments, while the Braided Concept Spool features a special core designed to be used in conjunction with braided lines. As on the spools, the same Hybrid Concept has been applied designing the handle, thus to reduce again weight and get the extreme performance. The drag assembly is completely sealed from water any other debris and it works on oversized washers with the addition of a ball bearing to increase the smoothness. A concentrate of cutting edge technology and performance.

	MODEL

Xenos XOS

All gears are in stainless steel, while the central shaft controls the Slow Oscillation System drive which regulates line winding. The roller bearing on the central shaft ensures exceptional fluidity. Other components include infinite anti-reverse, single-piece handle in aluminium with soft touch knob, anti-twist line roller, oversized aluminium hollow bail and aluminium body. Particularly suited for vertical jigging and heavy duty spinning.

- 6+1 Long Life Ball Bearings
- Duraluminium Body & Rotor
- SOS System
- Infinite antireverse "One way"
- One Touch Handle
- AS Line Roller (antitwist system)
- Powerbail
- Front Drag System With Sealed Ptfе Coated Magnum Drag Washers
- Duraluminium Spare Spool

TRABUCCO
FORM & PERFORMANCE

Trabucco offers a wide range of reels where you'll be able to find a lot of them purposely designed for lure fishing in all its exceptions. From the smaller models, extremely lightweight and featuring full carbon bodies, simply perfect for Area Trout and ULG techniques. Up to reels designed to withstand the heaviest duties, where all the components are designed and manufactured to enhance performance and reliability when subjected to extreme stress.

Check the Trabucco complete range in the dedicated section starting on page 133.

EASY CAST

Easy Cast technology is a massive breakthrough in reels development, developed using an hybrid braking system combining a 6-way magnetic brake to a 6-way centrifugal brake, to deliver a whopping 36 drag combination to allow anglers fine-tuning and drastically reduce the "backlash" effect. The centrifugal brake acts positively in the initial stages of the cast, when the high rotation speed releases a greater centrifugal force, thus to allow a smooth releases of energy. While the externally adjustable magnetic cast control system allows for fine adjustment on the waater and it works in a complementary way, by adjusting the spool rotation just in the final stages, when centrifugal forces are lesser due to the friction and allowing a more accurate and precise placing. Easy Cast System do not reduce only the tangles when casting, but thanks to a better friction control is able to deliver longer and more accurate casts!

Dyna Tex ULG Braided

It flows smoothly and silently through the rod's guides, bringing the lure beyond the expected spot, then it does the underwater job quite accurately, cutting the liquid like a laser beam. It sends and receives all the signals that lead to the predator's attack, actually raising the overall level of your fishing action, of course starting from the catch rate. Miraculous line? Not really, but certainly it is an avant-garde product, destined to gain a solid trust from all users, thanks to its intrinsic capabilities and qualities. It features an incredible coexistence of compactness and flexibility, the first guarantor of the breaking strength, the second responsible for the correct presentation of the lure. That's merit of Japanese technology with which the High Modulus Polyethylene fibers (HMPE) have been braided, obtaining a circular and consistent cross section. The range of diameters is as essential as perfect: after all, beyond 0,07 mm you can no longer talk about «Ultrafine Braid», let alone «Ultralight Game», the application field which includes Trout Area, a large part of Street Fishing, Rock Fishing and Eging, practically the most recent and exciting techniques! The bright yellow color is highly visible to the user.

- Super round
- Super soft
- High abrasion resistance
- Superior knot strength
- Hyper sensitive
- Dyna Tex high modulus PE. fiber
- High cast performance
- More compact
- No reel memory
- Japan Technology

Dyna Tex Fire Ice is the result of many investments and efforts from Rapture. The quality we have achieved in this braided line is simply incredible: diameter - strength ratio is at the top, if compared with other translucent clear braided lines, and same applies to the abrasion resistance. With this super line is possible to cast at incredible distance, cause of the smooth surface, and thanks to the zero stretch you can detect the most shy bites and easily set the hook even when fishing very far from the shore. Colour is white translucent, and it's available in 100 m spools from diameter 0,10 to 0,30. We recommend "Palomar" knot for swivel and "Mahin" knot for connection with other lines.

- Superior Coating
- Near 0% Stretch
- More Compact
- Thinner Diameters
- Round Profile
- No Reel Memory
- Highest Abrasion Resistant
- Superior Knot Strength
- Longlasting Performance

**T - FORCE SPINNING LINES
BRAIDED & MONO**

Spin Cast

Technical monofilament created for spinning. The molecular structure, combined with the outer silicon coating, reduces the mechanical memory of the line while maintaining an excellent handling and castability. It is therefore ideal for long casting and intensive lure fishing. Fully waterproof, thanks to the special coating that insulates the structure of the line from the environment. It also maintains all its characteristics unchanged after prolonged use, even at very low temperatures. The colour, light grey-green transparent, maintains a very low degree of refraction in the water.

Fluo Spin

Advanced predator fishing line, made from 100% Fluorocarbon, developed specially to face all those situations when extremely shy fish are targeted. Due to refraction index very close to the water's one, it offers unmatched performance in extra clear and transparent waters. It cannot be detected by fish and so cannot alarm them. Perfect for spooky species such as trout and perch. The wide range of diameters can fit the needs of many different fishing styles though. Thanks to the incredible abrasion resistance, can also be used to make high resistance leaders.

051-92-300	0.307	17.030	7.725	10	

Spin Hi-Viz

New high visibility spinning monofilament, specially designed for all those fishing techniques where sensitivity needs to be combined with the absolute visual control of the line. For this reason, we have worked hard to obtain a high visibility, no memory line and with reduced stretch ratio. Excellent abrasion resistance, it's perfect to be used in areas holding dangerous obstacles such as snags or rocks.

With tiny lures such as ultralight spoons, one of the main problems is lack of sensitivity, as contact with them is affected by line's behaviour. Braided lines are the most sensitive around, but they tend to float, so, once in water, the alignment between rod's tip and lure is never straight. Problem definitely solved with Rapture's Polyester Line! While braid traces an arc in the water, polyester goes straight from rod's tip to the spoon, thus offering higher sensitivity.

- Monofilament designed for Area Trout
- Ultra low stretch for easy bite detection
- High specific gravity makes it sinking
- Very supple and memory free
- Flows smoothly through rod's guides
- A paper label marks the 100 m length
- Crystal clear colour

		∅	lb	kg	PC

051-99-014		0.148	3.30	1.497	10	

Especially designed for trout fishing with lures, this monofilament features an optimal ratio between stretching and strength. High abrasion resistance and very low visibility in water. Thanks to a wide range of diameters available, it can be used for many different techniques, starting from trout fishing in small creeks with thinner diameters, up to the record catch in the biggest European rivers using the largest diameters. Spooled under parallel winding technology to improve line lay and limit tangle's risk, it is packed on 150 m spools.

This greenish-brown monofilament is designed specifically for pike fishing and other big freshwater continental predators. It is exceptionally strong and has the perfect combination of low stretch and high softness, making every lure easier to cast. Unlike other cheap spinning lines, the low stretch feature allows the angler to have a much more direct control of the lure and easily strike on to the fish attack. Spooled under parallel winding technology to improve line lay and limit tangle's risk, it is packed on 150 m spools.

**SPINNING & VERTICAL JIGGING
BRAIDED & MONO**

Spin Zander

Spin Zander is designed and dedicated to this exciting fishing technique. It is a very low stretch line and it is very suitable for detecting even the lightest bites and rapidly set the hook. The absence of memory and superior abrasion resistance are other very important features. The colour is a dichroic green olive, offering natural camouflage within the aquatic vegetation. Parallel winding in 150 m, the spools are individually packed.

**Spin Zander
Cristall**

We spent many hours on research and development for this new monofilament. This new product match perfectly all the most important features required by the modern zander specialist angler. The particular colour of this innovative monofilament is the best you can get for good visibility to the angler outside the water and at the same time reduced visibility inside the water to obtain an optimal presentation of the bait. Thanks to no memory construction and low stretch, it's possible to easily detect the lightest bites.

Vertical Jig Mono

Designed for all Vertical Jigging lovers, this mono is produced from a mix of Japanese co-polymers which provides extreme abrasion resistance and reduced stretch. With Vertical Jig Mono it is always possible to know how deep you are fishing thanks to different colour every 25 meters, these coloured sections are repeated in six different colour for the all 300 meters length. The great knot strength, the lack of memory and anti-UV treatment, make this line a perfect choice also for spinning.

Weight

Box Content

Trade Box

Lures' Technical Specification

Full Wire / Through Wire Design

Full Wire (Through Wire) construction simply means you have a wire connection from the tow point to the hook hang points.

Weight moving

Several weights are housed inside the body lure, in one or more inner rooms allowing them to move back and forth. During casting action they will move to the tail, increasing casting distance, while during retrieve will move to the head, increasing stability.

Fixed Weight

The weights inside the body lure cannot move. In this situation the lure is much less noisy and very useful in over fished venues.

Bass Sound

Inner weights produce low frequency vibrations.

Wiggling Action

Crazy side to side action, great for targeting finicky predators of any species.

Wobbling Action

Wobbling lure, with strong tail action. Wobbling will excite predators producing extra vibrations and flashes.

Dart Action

Darting lures must be jerked, adding movement with rod tip. The lure will therefore dart in several directions just like a wounded fish.

Rattle Sound

Inner weights produce high frequency vibrations.

Rolling

Rolling lure, the body is rolling on its own axis. Extra flashes and tight swim.

S-Concept Action

These lures swim creating a sort of S into the water. In this way it is possible to scout a larger area.

Lures supplied with both single and treble hooks as standard.

Sure Hook Set is a simple but effective solution to guarantee a perfect hook-set and to reduce drastically the hook-pulls. SHS will help you also to switch between lures in while.

Ultraviolet reflective colours

radiation, with a short wavelength and a high frequency that is located immediately outside the spectrum visible by the human eye. The UV rays are emitted by the sun and are always present, both in the night hours and during cloudy days, but only some of these are able to pass through the atmosphere, in particular only the UV-A with a wavelength from 400 to 315 nm reach us. The UV-A rays do not reach the ground only, but they are also able to penetrate the water column, reaching the depths normally unreachable from the conventional light we are used to.

Naturally, anglers tend to judge lures, their finishes and colours as they appear to the human eye. Recent studies have shown the basic biological differences between the human eye and the eye of a fish. While the human eye has a great capacity to distinguish colours and details, the eye of a fish is made to catch better the contrasts and to detect motion. Moreover, we must consider the environment where predators live, beneath the water's surface, where colours in the visible spectrum are quickly filtered out. Colour removed, what remains are shades of grey only.

Said that, it was shown that many predators, notoriously active at night, are able to sense the light within the UV-A spectrum. So fish, as well as other animals, perceive the light in conditions in which we are not able to! In the design and development of lures, with particular reference to the colours, therefore, it is very important to make them more visible as possible to predators' eyes, in low light condition like at night, during the cloudiest days or even in the depths. For this reason, we introduced

The ultraviolet light or "beyond violet", more commonly known as UV rays or UV light, is a type of light, or better defined an electromagnetic

the brand new "UV colours" in our colour range. These lures are made with paints able to reflect UV rays, apparently normal colours for our eyes, but that certainly will not go unnoticed to predators!

Below it is represented the ROYGBIV spectrum, visible by the human eye, within the range of electromagnetic radiation.

Hyper Real

Inspired by the nature that surrounds us and populates our fishing spots, the Creature Series Lures represent "Hyper-Real" imitations of creatures and insects in both features and movements. At home in the pristine spots typical of the Native environment, hunting for trout, chub and other predators, as well as in artificial spots typical of the Trout Area, especially in the most vivid color variations.

Native Series

Made for fishing in streams, in spots subject to little pressure, which hold native and difficult fish; in such conditions, the approach, as well as the choice of the right color, always make a big difference. That's why we designed this range with soft and natural colours, ideal for clear waters on wary fish that only attack by natural instinct.

Nature Color

Exactly as nature creates! The Nature colours are obtained through new production technologies that allow to create any real state of the art miniature, perfect in every detail, that carefully replicate the liveries of natural minnows.

Cluster Color

Creative Power! The cluster colors obtained through the application of grained varnishes, combine various shades to achieve results which have never seen before. Unique in their kind, they can replicate the shades of natural colors, or even invent some new, abstract, ones, able to trigger the attack even in the most apathetic predator, both in spots subjected to high fishing pressure and in natural and unspoiled environments.

PRO SERIES LURES**

Beetle Area

The Beetle is the imitation of a terrestrial, that is a bug that can occasionally fall into water and become trout food. It often happens that exactly this kind of food, alien to the underwater world, is triggering the killer instinct of trout, maybe due to the high number of vibrations produced by the numerous legs that shake in the attempt to get back to solid ground. Some of the colour assortment are natural colours, some other are only partially natural. We choose this way because it happens that you need to dumb-fund the trout with something special instead to give it a plain 100% true replica of an insect.

Grasshopper

Grasshopper is one of the more natural and appreciated food for every freshwater fish, especially for wild trout, that seems go crazy for this insect in springtime and summer. The Rapture Grasshopper is a faithful replica of a live cricket, imitating the countless colorations it can assume and it can be used in creeks and small rivers to catch really big trout. You must apply a much varied retrieve, simulating a cricket panicking for its fall into water. We added, anyway, a lip to this lure, that can help you to change style of retrieve in favour of a more traditional steady one. Even in this case the Grasshopper will still have its own distinctive and original tract.

Diavel Area Crank

After watching dozens and dozens of spoon through water, Trout can not take it anymore, they seem to hibernate. They already know the catalogues of all existing brands, but they still would like to attack something substantial. So... So we switch to a different lure, able to move a bigger water's mass and thus activate from distance the nerve endings of the lateral line, which in the Trout are very sensitive. Let's try a Diavel, the mini Rapture crank designed specifically for fishing situations which are the trade mark of Trout Area: clear and shallow waters, relatively short distances, shy fish because they feel the presence of too many fishermen on the lake's banks.

Riujin

Bigger brother of the Firework, the Riujin is 45 mm long and it's another sinking wobbler. Its weight, 4 grams, makes it perfect for fishing faster and wider rivers and for deeper waters, where it can attract bigger predators. We suggest to use this fantastic wobbler in many different environments, from lakes to rivers, without forgetting to give it a chance in salt water too. Super natural motion.

Sentinel

With the two classic sizes of 5 and 7 cm, this minnow is essential for the true enthusiast of hunting for wild trout in natural environments, surely one of the most classic techniques! In fact, all the available colours actually imitate the livery of the natural Trout prey: gobies, common minnows, bleak, brook barbel, small chub, up to the minnows of the same species. A very interesting level of stimulation, which does not replace any of those fancy alternatives but is a fundamental starting point. The relevant weight, compared to the volume, is valuable to keep the live current and explore the holes that host the most beautiful specimen.

Ryoko Crank

Small sinking rounded crank for shallow still water fishing. Amazingly effective with trout, chub, perch and black bass. Best performing with slow retrieve, stop and go and some jerking. In this way predators are attracted by what they think to be a wounded fry. The relatively small weight allows a very realistic sinking action.

BB Crank 05 DR

Evolution of the existing BB crank 05, 2012 World Champion lure. It dives deeper up to -2 meters, so 4 times deeper than previous lure. According to your need and to the fish mood it can be retrieved very fast, medium speed or really slow, in all these situation the BB Crank will appeal the predators with a wobbling movement. The super compact body makes this lures fly more distant than other cranks and it enters the water more silently, that is very important in areas where fish is subjected to intense fishing pressure.

Sniper Squarebill 50 SR

The Sniper 50SR features a compact body with an aggressive action that is made to dive into shallow water and sniff out big bass and pike. A finesse crank designed for crashing thick shallow cover, ripping out of grass, cranking rocks, or just burning in open water. Sniper is affixed with a durable square bill, features a fast wobbling action, reaching the desired diving depth quickly and delivering a deadly deflection able to generate violent reaction strikes. Despite its small sizes, Sniper 50SR is also built with a precise weighting system that allows for long distance casts - even in windy conditions. Sniper 50MR delivers a powerful shallow water presentation that locks onto big bass and pike - and won't let go!

Sniper 50 MR

Sniper 50MR is a medium depth runner crankbait designed to take finesse cranking to the next level! Perfect for those tough, high pressured spots, Sniper 50MR features a unique design to hunt erratically with a vivid wobbling action and generate strikes from finicky fish. While the precisely shaped lip, weight transfer system, and chunky body work together to get into the strike zone quickly when casting in and around to structure or heavy cover. For an added element of attraction, the Sniper 50MR even produces a faint rattle that will attract bass, but won't spook them. Sniper is packed also with an incredibly lifelike scaling pattern, the big Sniper elongated eyes that bass simply love and seal the deal on strikes!

**CRANK BAIT
PRO SERIES LURES**

Sniper Max 70 SR

It swims irregularly in the surface layers of the water emitting substantial vibrations, thanks to the freedom of movement of the internal load. The squared design of the lip makes it able to quickly get into action, causing it to frantically oscillate immediately after landing in the water, to take advantage of every inch of the area close to the underwater obstacles. The rich colors and large eyes add important elements of attraction. Treble hooks made from hi-carbon steel and chemically sharpened.

Sniper Max Vibe 70 LP

Sniper Max Vibe is the perfect complement to Sniper series. Sniper Vibe is a lip-less sinking crankbait, perfect to fish over deep structure, ripped through grass or burn it in open waters. Perfect for suspending or schooling fish, Sniper Max Vibe produces a wild swimming, with tight wobbling action combined to a lethal rattling sound. It can be fished with a linear retrieve, exploring the water column simply by varying the retrieval speed, or for deeper water presentations you can alternate a steady retrieve by using your rod tip to make the lure rise and fall (YoYo Retrieve). The precise weighting system gives it a seductive shimmy on the drop and allows for long distance casts!

Sniper Max 70 D

Sniper Max 70D is a mid-depth crank bait with a linear body, not too big not too small, that delivers a look and action simply right! Excellent to fish over deep water structure, for suspending or schooling fish, Sniper Max produces a wild swimming, with much wider wobble than most crankbaits with a fish-attracting turbulence trail matched to a lethal bass rattling sound able to grab the predator attention, without spooking them! Sniper dive it quickly and sustain its true running depth for the majority of the retrieve. The deflective bill design and its high buoyancy characteristics also allow it to back up and float out of snags.

**CRANK BAIT
PRO SERIES LURES**

Sniper Max 80 XD

Sniper Max 80XD is a magnum sized body crankbait able to reach extreme depth with ease and able to get you in front of fish that you previously couldn't reach with a crankbait! Designed to dive quickly and efficiently to desired depth with less drag than baits of a similar size, the Sniper Max 80XD maximizes your time in the strike zone, while adding a fish-attracting turbulence trail. The deflective bill design and its high buoyancy characteristics also allow it to back up and float out of snags. A bass sound rattle creates a light yet deep knocking sound as well that provokes strikes without spooking finicky fish.

Super Dexter

Heavy lure for fresh water fishing that must be retrieved steady with occasional jerks and pauses that will make vary its swimming depth. It is a versatile lure thanks to its weight, 32 grams, and length, 11cm, and it can be attacked by a large number of predators, from pike to trout and zander. The livery has been protected by a double layer of transparent coating for extra protection against friction with gravel and rocks.

Shaddy

Rapture Shaddy is a sinking minnow with internal rattling system producing high frequency vibrations. The special L blade allows this bait to reach and keep the desired depth. The Shaddy action is very good at low speed too and still producing a large quantity of vibrations. It is possible to get the maximum result from this lure retrieving it close to rocks and logs. The L shaped lip gives a high stability during jerking action.

PRO SERIES LURES

Trout

As you can guess from the name the Trout is an excellent lure for trout fishing, both in lakes and rivers, where it keeps a perfect swim even if very strong stream of water. Its typical movement can be appreciated especially with steady retrieves at moderate speed. In this situation the Trout can trigger strikes from the shyest trout. The inner weights disposition gives always a perfect swim and a controlled dead leaf sinking action.

Dexter

Don't be fooled by the innocent look of this lure! It is actually one of the most deadly lures you can use fishing in lakes. It can be retrieved at different speeds: when retrieved slowly it will attractively swim close to the bottom. If you stop retrieving the Rapture Dexter will sink even more creating a peculiar movement that will trigger trout to bite it with great hunger. When retrieved faster and with your tip raised, it can swim much closer to the surface and the in intermediate zone. Even in this case occasional pause will make it fall and excite the trout to attack it. Its measures, 28 grams and 7.5 cm will grant you to cast it right the trouts are, no matter how far.

Doozer

One-piece floating minnow designed primarily for trolling fishing both for salt-water and freshwater predators. The particular shaped lip and the weight position allow the lure to reach easily the desired depth, producing an excellent and deadly effective swimming action. Big inner rattles produce loud sound and vibration that attract predators from great distances or in low visibility or muddy water conditions.

**JERK & SWIMBAIT
PRO SERIES LURES**

Sharper Jerk

Brand new sinking jerkbait designed from the Rapture Team with pike fishing in mind! The two sizes and weights fit most of the fishing conditions you may be faced to, from large lakes, to canals and rivers too, both trying to catch in shallow water or on deeper stages. Sharper Jerk is a true allrounder and can be fished in several different ways, all of them proven to catch fish during our tests, to you can have the traditional retrieve with jerk/pause or even a linear retrieve on weed cover or close structures, exploring the water column simply by varying the retrieval speed.

Silent Shad

Our Silent Shad is definitely a multipurpose lure, as a matter of fact sizes and weight makes it suitable for every freshwater predator. The slow sinking action allows to fish at different water levels and to retrieve at different speeds to achieve different goals. During our test we used this lure with steady retrieve alternating few breaks to let the Silent Shad sink for few seconds with really good success on black bass, pike, big trout, asp and catfish too. Top quality components and quality treble hooks makes this swimbait totally reliable.

**LIPLESS & STICK
PRO SERIES LURES**

Haruko Glider

Sinking lipless minnow with high specific weight. Thanks to its shape it can be casted very far where, especially in lakes, lake trout and chubs are not used to see a lure. If you are fishing rainbow trouts in fisheries the Haruko Glider will be one of the very few lures that can actually reach the schools of trout far from the shoreline, allowing repeating catches. It is deadly even if you don't retrieve, just let it sink and its wobbling action while diving to the bottom will attract the stalking trout.

	MODEL	PCI
180-11-906	S / Silver	5

VIBE & DEEP RUNNER
PRO SERIES LURES

Saltride DR

Saltride DR is a very interesting Jerk minnow featuring a high weight to volume ratio, a specification which produces two interesting results. Firstly, it makes the lure fly to considerable distances; on the other hand it lets it dive down up to four meters from the surface, where it assumes a linear and constant path (in fact, DR means Deep Runner). This sum of specifications makes it ideal for spinning from the shore, as well as from the boat, getting a special attention from Bluefish, Leerfish, Little Tunny and Bonitos, practically a wide universe of marine predators which are particularly aggressive and fast in their defence, whose population is growing in the Mediterranean, at the same pace of their

hunter's panel. Among the available colours, the two solutions predominantly white really stand out, as they are highly effective during low light hours; in particular, the Glowing shows the ability to absorb radiations provided by a light source, slowly releasing them in the water to attract the predator's attention.

Running Depth: Variable / Hooks: #04 Permanent Steel

Shore Rush

DEEP Runner

Jerk minnow a very compact and heavy body, suitable for sea spinning both from the shore and from the boat, which reaches important casting distances. Its small size directs him to cold weather fishing, when the available forage fish is rather small. But let's not forget that a tiny offer is always accepted by the fed up predators, so a couple of casts with the Shore Rush are always worth a try even in summer season, with high speed retrieve style. The special dorsal fin stabilizes the swimming action, while the lip surface and its inclination make it swim at significant depth, up to three meters mark from the surface. In the pauses of retrieve it sinks, simulating the attitude of a suffering little fish and unleashing the aggression by Bluefish, Leerfish, Sea Bass, Bonitos and Little Tunny. Very interesting is the range of available colours, with classic and bright colour, all with quality finish and details.

SEABASS SPECIALIST
PRO SERIES LURES

Windcode

The Wind Code is a sinking lipless wobbler that can be used in a great variety of conditions, in freshwater but it's in saltwater where you get the most. For saltwater fishing we can assure you it is a bass killer, while in fresh water you will find it is great for trout and asp. We suggest a medium fast retrieve alternating short jerks and linear retrieve. Don't forget a stop&go retrieve with pauses of a couple of seconds to excite the predators. Power Point hooks for extreme sharpness and high durability.

Rapture Sapphire is a truly allrounder jerk-minnow, fully pack with great innovations and technically advanced solutions, from the polycarbonate body construction, through the new UV paints, the "Weight Moving" system and the advanced aerodynamic design that allows to easily reach great distances. The body shapes is a true revolution, with triangular shaped structure with the centre of gravity positioned in the upper portion and with wide side walls, which allow Sapphire to deliver a perfect swimming action also in presence of waves and current. Moreover, this particular construction combined with the body transparency and the inner holographic sheet, let Sapphire to produces flash and lights to stand out from the environment and to grab predator attention and entice the attack. The polycarbonate body integrated lip is angled to deliver an erratic side-to-side swimming action. Sapphire can be successful fish with several methods, including a retrieve & pause, slow to moderate retrieve, or a twitch-pause-retrieve fashion. A real joker for saltwater fishing.

Lubina

The Lubina minnow series has been specifically designed to catch all marine predators with a spinning technique. The result is a bait that is very resistant to impact and to the worst weather and sea conditions. Thanks to its aerodynamic shape it can be casted to enormous distances even in unfavourable strong wind conditions (as it is frequent during fishing session on the sea shore). Despite the name it is not just for sea bass but it is also deadly for bluefish and garrick.

Delta Walker

Rapture Delta Walker is a realistic long shaped minnow, with great casting properties despite its weight even in windy conditions. The strong angled lip is designed to work on the upper layers of the water column. Delta Walker produces an erratic swimming action with tight and nervous side to side movements to entice predators to attack. Ideally suited to seabass fishing close to a delta or mouth, as the name suggests, Delta Walker can be well employed also for other predators on rocky shores and upper layers.

PRO SERIES LURES

Bay Rush

Bay Rush is a small darter style minnow, designed to minimize aerodynamic resistance thus to be casted at distance and deliver a great swimming action in the upper layers. It's suited to seabass fishing at most, on rocky shores, close to a delta or even on sandy bottoms. Even on a slow speed retrieves Bay Rush is able to provide an erratic side-to-side swimming action with sudden movements great to entice predators to attack. The integrated lip helps to reach long casting distance, reducing damages from the impact resulting particularly suited to fish close to reefs or submerged structures. Rapture Bay Rush is also part of our "Bloody Edition" range, with blood red components to simulate a wounded fish and combined to hyper-real paints, glowing or UV paints. A small lure able to deliver great satisfactions!

**DARTER JERK
PRO SERIES LURES**

Momoko

A great classic in the darter jerk family, Momoko has gained a solid reputation over the years for seabass addicts, a real joker on most conditions either on rocky shores, close to a delta or even on sandy bottoms. The integrated lip design, matched to the weight transfer system, help to minimize aerodynamic resistance, thus to reach long casting distance with ease, delivering at the same time a great swimming action in the upper layers and reducing damages from impacts and resulting particularly suited to fish close to reefs or submerged structures. Easy to use, Momoko can be successful fish in several ways, producing different swimming actions, starting from a moderate side-side action under a slow and steady retrieve, to a "S" swim action with a faster speed retrieve to cover a large area in the swim, up to a classic darting action under jerk style retrieve. Momoko is a highly considered bait that can't miss on your selection!

Assassin

We can define the Rapture Assassin as one of the most classical shake lures for salt water spinning to sea bass. It is medium sizes, while its shape resembles that of the mullet. It is sufficient a medium speed steady retrieve to catch the attention of the big sea bass living in estuaries, reefs and ports. The floating action makes this lure perfect for shallow waters.

SEABASS & LONG JERK
PRO SERIES LURES

Seidan

Seidan represents the perfect imitation of a most common inshore bait fish, perfect to fish close to delta, rocky shore or in the harbours fishing for the queen... the seabass! Despite the reduced body sizes, Seidan guarantees excellent performance on the flying to reach great distances as well as in the swimming action, thus thanks to a careful study of the aerodynamic and hydrodynamic flows effects on the body, combined with a perfect balance of the internal weights. The extra-long shaped body and the small lip let us to class the lure into the long-jerk portfolio, even these features do not afflict the swimming action allowing the lure to be perfectly twitched and jerked, producing an hyper-realistic swimming action to entice bait even in sluggish predators. Precision to details and realistic colours are the icing on the cake for this small great lure.

Magneto 190

During the development and test stages it got the nickname "The Big Mag", due to its size and it represents the natural evolution of the Magneto series. The Magneto 190 is born to cope with the ever increasing need for XXL lures to catch predators such as bluefish and barracuda, which are rapidly increasing their presence and sizes also in our waters. Magneto 190 maintains unchanged the exceptional features of its smaller versions, with an unrivalled swimming action, the great cast properties and the durable construction. Emphasizing once again the attention to details of the Rapture Team.

S-Stalker

Long Jerk bait that can be used in many situations. The profile of the body and of the lip allow a very wide swimming action, exploring a vast quantity of water. It can be retrieved either linearly or with pauses and restarts or it can be jerked. In fresh water, pike will definitely be the more interested in this lure, while at sea it will be barracuda stubbornly chasing him.

SEABASS & LONG JERK
PRO SERIES LURES

Cuda J

It seemed impossible to produce a jointed minnow that could fly in a proper way and at long distance! This brand new lure feature an innovative V joint which allows to cast it as a one piece casting minnow. Thanks to this joint the Cuda J swims actively, producing very attractive vibrations. Deadly for sea bass, blue fish and barracuda.

The brand new LD 200 represents a completely new addition to the Supertide family, not just a larger size but a new project, developed to redesign the concept of long jerk! It won't replace, but just maintaining and improving in certain circumstances the excellent performance of the Rapture Supertide LD 175. It doesn't happen frequently to find a lure that includes a so aerodynamic shape, a perfect swim and a superior castability. A medium-fast retrieve produces a sinuous swimming action able to draw sea bass attention from a long distance. If you jerk it every now and then you will see it scatter wildly like a wounded fish. Bluefish and barracuda are other species that will find the Super Tide LD a nice food, especially if you will add more heavy jerks during the retrieve.

PRO SERIES LURES**

Shore Gun

Rapture Shore Gun is a one piece wire through construction jerk, with a small lip running through the body axis, perfect to catch medium and large size predators, such as bluefish, leerfish, dolphinfish, bonito, schooling tunny or other pelagic predators in the scombridae family. Perfect to fish on the edge of the fish bonanza, close to the holding points such as platforms and shipwrecks, or even to imitate a large prey fish, such as mullets on the outer part of a big river's mouth. Shore Gun can be successful fish in several ways, producing different swimming action based on our impulses, starting from a moderate a side-side action under a slow and steady retrieve, to a "S" swim action whit a faster speed retrieve to cover a large area in the swim, up to a classic darting action under jerk style retrieve able to produce flash and lightening in the upper layers. The fixed weight is positioned towards the tail allows the lure to be cast to incredible distances with extra accuracy, this solution let the Shore Gun also to keep the swimming action in difficult conditions, where most of the lures can't be fished with good results. Shore Gun introduces great innovations and features, from which stands out the SHS System, the "full wire" construction to withstand the strongest fighter.

Deltacode

The Delta Code is 125mm sinking lipless with an aerodynamic shape that can be casted like a bullet and has a really wide range of uses. Beside the great casting performance it can be used to scout different water level due to its weight and the sinking action. We suggest a fast or medium-fast retrieve with well settled jerks to alter its direction. It can be used also in strong stream and with rough sea. You can easily cast him against a frontal wind with no problem. It is the perfect lure to fish from cliffs and beaches, even shallow ones. A deadly lure for bluefish, seabass and cuda.

Running Depth: 0-0.8 m / Hooks: #04 Permanent Steel

Underchaser

Over weighted lure for under-the-surface action. It perfectly imitates the desperate and frantic motion of a fleeing shad that already know it will die into a bigger fish's mouth. Two small lateral keels increase stability e hyper realistic swimming action.

	MODEL	PCJ
180-14-119	LGH / Lime Ghost	5
180-14-149	HH / Hot Head	5

DATA: 95 mm / 23.0 g / ACTION: Sinking
Running Depth: 0-1.5 m / Hooks: #04 Black Nickel

Acciuga

Small lipless slim lure that weight 30 grams in only 9 cm length, making it a true bullet to shoot at great distance. The peculiar belly shape makes it shale and vibrate while sinking. The sinking action is quite slow, allowing predators to attack it. It is a super lure to be casted in the middle of bait balls created by mass attacks of pelagic predators such as schooling tuna, dolphin fish etc. The Rapture Acciuga is equipped with top quality 3X treble hooks able to face the strongest fights. Split rings are properly dimensioned.

Running Depth: Variable / Hooks: #06 Permanent Steel

Rocket Jig

The Rocket Jig is a lure with strong vocation for the long casting and can be fished both from the boat and from the shore. The special shape makes it suitable for very fast retrieve with frequent jerks to make it alive. The sudden jerks trigger the natural inclination to attack inherent in large predators. Moreover, thanks to a clever use of the rod tip, this lure can be done fished at different depths.

**STICKBAITS
PRO SERIES LURES**

Magtide

Rapture Magtide is a good sized topwater stickbait, perfect to fish on the edge of the fish bonanza imitating a large prey-fish, close to the well-known holding points such as platforms and shipwrecks. The Magtide main target are generally good size predators such as tuna, GT, leerfish or dolphinfish. Extremely easy to use, Magtide shows the typical swimming action of the topwater WTD lures, with the classic darting action under jerk-pause style retrieve producing smooth and large side-to-side movements producing flashes and lightening in the upper layers of the water column thus to grab predator attention and entice the attack. But under a steady and fast retrieve it is able to swim just below top-water. Apart from the outstanding swimming action, Magtide offers also great casting ability, thanks a careful study of the aerodynamic and hydrodynamic flows effects on the body, combined with a perfect balance of the internal weights. Magtide is full-packed with great innovations and features, from which stands out the SHS System, the "full wire" construction to withstand the strongest fighter. Magtide is also supplied with both treble and single hooks as standard.

Corsaro 100

A well-known hi-tech lures that meet the demands of serious anglers! The Corsaro features excellent flying properties to reach great distances with ease thanks to the aerodynamic body and the weight positioning. But it's once Corsaro hits the water that delivers the best performance, even with light twitching, Corsaro splashes the water well accompanied by a sweet pop sound to attract the predators to reach out. The one-piece wire construction lead to no compromise on reliability to withstand the strongest fighter. A great allrounder Corsaro is perfect to catch medium and large size predators, such a bluefish, leerfish, dolphinfish, schooling tunny or other pelagic predators. Definitely a topwater master you won't really miss in your bait selection!

PRO SERIES LURES**

Yankee Pop

Top water lures, and poppers most of the others, are specially designed to be more visible and noisy as possible. That's why the Yankee Pop has a very broad and strongly concave mouth and big eyes. This bait can really create a great chaos effect on the surface, attracting predators, even at long distances.

Tide Pop

Rapture Tidepop represents the state of the art in topwater popping lures! Tidepop features a large concave head and a typical dumbbell shaped body, to deliver a great surface action, to move huge volumes of water creating a distinctive noisy pop with splashing and lightening to grab predator attention! Apart from its outstanding action, thanks to a careful study of aerodynamic and hydrodynamic flows effects on the body, combined with backward weight positioning, Tidepop allows to easily reach incredible distances with extra accuracy even in strong wind conditions.

Raideen Pop

Designed for surface fishing, typically in the summer time, since ever the Popper is a pillar of sea spinning, with its typical rhythmic sound, dictated by the rod. In this model of 12 centimetres it stands out the oval shape of the front, which pushes away a substantial amount of water, creating a relevant puff. Despite its compact size, the Raideen Pop is equipped for the most strenuous battles, having the steel wire that runs through the body to connect the front ring to the two holding hooks: an important detail if you think that this lure will be hunted by Bonitos, Bluefish and assorted Thunnidae. The high weight to volume ratio really improves the ballistic properties and stability of swimming when sea is rough. The wide range of available colours includes a Glowing, which absorbs light and spreads it in water for a long time: try it in semi-darkness conditions and see what happens!

Raideen Pop GT

A family of generously sized Poppers, with two models of 16 and 20 centimetres that can't miss in the lure box of those who are flying to the warm seas in search of unique emotions with the legendary Giant! Trevally: for the fans simply "GT", for any lure a real nightmare! In fact, these lures feature a steel wire which runs through the body and connects all the rings, ensuring that the most brutal aggression won't destroy it. For those who fish in the Mediterranean, there are countless opportunities for fun with Raideen Pop GT, since Leerfish and Tunas of unpredictable size go after them at supersonic speed, unleashing their fury with runs just as powerful. The oval design of the concave face is intended to raise a mountain of water, sending a clear message to predators; the bright colors will do the rest. Adequate rods are highly recommended, to be chosen within the Rapture Giant Run series, able to cast these heavy lures and also to manage the consequent fight with the necessary authority.

**TROLLING
PRO SERIES LURES**

Atlantic Runner

Special trolling lures that dive very quickly and maintain a regular depth. They can be trolled up to 9 knots. Thanks to the large lip, it reaches up to 6,5 m swimming depth. Internal link between rings for high strength. We recommend washing them with fresh water after use to keep the colours always striking.

Sea Runner

Special trolling lures that dive very quickly and maintain a regular depth. They can be trolled up to 5 knots. They are equipped with anti-corrosion genuine VMC treble hooks, rattling system and innovative multi-layer coatings. This series works from 4,5 to 9 meters in depth depending on length and weight of the model and they are suitable to chase those predators that hang suspended on the bottom or close to obstructions or reefs.

Killer Magnum

Killer Magnum is a superb lure for Mediterranean and exotic offshore trolling. It allows to troll at good speed down deeper in the hottest strike zone. The big size will select good sized predators. All the colours has been carefully chosen between the more popular amongst the anglers of every country. All finishes are top class, including 3D glass eyes and holographic painting that will last for a very long time. All the trebles are tin finished and reinforced (3X) to face the strongest fights with bigger fish: you can rely on them all the time. Available in 14 cm (diving 7 meters) and 18 cm (diving 9 meters).

Egi Hunter Shallow Runner

Egi Hunter are designed for squid and cuttlefish trolling, but they can be employed as well in Egi Fishing from the shore or rigged in a conventional Pater-noster style for vertical boat fishing. Egi Hunter lures are both floating, but they feature two different swimming actions: a shallow runner with a less pronounced lip and a deep runner able to reach great deepness in a while. In both versions the lip is livening up its action and gives the opportunity to make the lure diving to the desired depth. Equipped with high quality super sharp squid hooks.

ST Smash

Rapture ST Smash represents the fore front on lures development to fish on the edge of the fish bonanza imitating a prey-fish, close to the well-known holding points such as platforms and shipwrecks or again from rocky shores. The compact heavyweight body ensures excellent casting properties, matched to a great rolling action on the drop and with a classic darting action under jerk-pause style retrieve producing smooth and large side-to-side movements generating flashes and lightening in the upper layers thus to grab predator attention and entice the attack.

Gun Jig 44

Small but heavy metal jig with a very distinctive swimming action. It can be useful to reach the predators when they swim too far for standard lures. The big realistic 3D eye is an additional triggering feature of this long casting lure. We suggest to use the Gun Jig for fishing bonito, skipjack and other small to medium sized fish from the tuna family but it can be employed as well in fresh water, retrieving it very fast for big asp. Thanks to TiN plating, the treble hook resist to saltwater corrosion and their points keep sharpness for longer time, if compared to standard ones.

Cast Jig 38

The small metal jigs are a new weapon in your armoury and they are a very effective way for light fishing in salt water and fresh water. The Rapture Cast Jig is better used in salt water fishing in medium or deep waters and it can swim at different depths, just operating on the retrieve speed or changing the angle of the rod tip. Scad, small leerfish and saddled bream will be the fish that will most likely attack the casting jig. In fresh water this lure can be used to fish the perch in the deeper waters where they will school together during winter time.

Shirasu Cast Long Casting Jig

Fishing on feeding bonanzas is one of the most exciting techniques of sea spinning, that today lives a real boom in the Mediterranean sea. The sighting of the spot where the activity of predators focuses small forage fish is facilitated by the excitement involving sea birds, and is a vital part of the game. In such circumstances, ideal lures are the metallic casting jigs, among which stands the Shirasu, the specific proposal of Rapture characterized by unique profile, designed with the computer assistance to obtain an optimal flight attitude and reach great distances, without disturbing the fish shoal. We recommend a linear retrieve at good speed, in order to stimulate the attack from Bluefish, Leerfish, Bonitos and Little Tunny. To facilitate the use of these jig during dark hours, like dawn and dusk, the range of available colours includes four versions with glowing paint finish, which can take in light from a lamp and produce an irresistible attraction. The metalware has a double configuration: in the head area, an assist hook dressed with a crystal feather, connected via a Japanese PE cord, while a strong hi-carbon steel treble hook, with 3D Cut points, is fixed on tail end by a heavy duty stainless steel split ring. On the body of each jig the weight in grams is finely engraved.

Slow Pitch Cast Jig

A highly specialized metallic jig, designed by Rapture with computer assistance to achieve the combination of two apparently incompatible goals: the achievement of high casting distances and the particular ability to get to the bottom through erratically and unpredictably swinging. The first of the two characteristics is exploited on feeding bonanzas, using a linear recovery, while the second one is valuable to stimulate the predator's shoals hunting at higher depths. We know that at sea the first sign of difficulty for any living being is its irregular sinking, with intervals of temporary vitality. That's the way of ideal fishing style for these fantastic jigs: the free flat fall, interspersed with slow pitch jigging; such action is much less stressful than the traditional jigging, but just as equally effective in terms of catches. The silhouette of the body differs on the two sides: the spine is flat, while the belly is convex, with a diamond cut which shifts the center of gravity toward one end, just for the above ballistic requirements. Given the prospect of challenging fights, the whole metalware has been chosen from the best available in the industry. The two assist hooks in the head area and the single one on tail, both made from hi carbon steel with 3D Cut points, are set to robust solid rings via a PE cord. To encourage the use of these jig during dark hours, like dawn and dusk, the range of available colours includes four versions with glowing paint finish, which can take in light from a lamp and produce an irresistible attraction once in the water. On the body of each jig the weight in grams is finely engraved.

Asami Casting Jig

The aerodynamic shape reduces air friction during launch while maintaining a stable flight, making this lure capable of reaching extreme distances. Rapture Asami Jigs also have excellent action in water and can be retrieved steady or slowly jigged. Ideal for fishing from the shore, from piers or rocks, as well as for fishing offshore close the surface or jigging. Seabass, jacks, trevallies and barracudas are between the species that love this lures. All jigs come with original VMC hooks connected by a forged split ring for maximum strength.

Chibi Pop

These fantastic micro-poppers rightfully belong to the Chibi Lure's range, not only for their tiny size but also for the excellent overall quality and for the fishing opportunities that they can offer, in fresh but also in salt waters. Beyond the very actual colors, with many different matt solutions and a Glow that can take in the light, the lure comes with a white feather skirt, enriched by crystal strands to increase the level of visual attraction. Such addition also performs a ballistic function, because, once wet, it gains weight and counters the relative lightness of the whole thing. The Chibi Pop must be made alive by rhythmically working your rod and reel, so that it will spit water to awake the sleepy predators like Trout, Chub, Perch and Black Bass, especially in summer. In the lakes it will draw the attention of winter Trout, when attending surface layers in search of warmer water. Chibi Pop is also worth a try at sea side, for a pleasant fishing to Pompanos and Dorado with light action rods, able to actually prolong the fun.

Running Depth: Top Water / Hooks: #10 Black Nickel

Chibi Crank

This small floating crank of just 28 mm and 1,8 grams weight looks like a little gem. It is made from an extremely hard polymeric plastic material and is carefully painted with high visibility colours. The final look is so nice that we are sure it will become a kind of collectable item, even though it's tremendously effective once in action. The Chibi Crank is equipped with a size 8 chemically sharpened Power-point barbless single hook and thus can be used in reservoirs too.

Running Depth: 0-0.5 m / Hooks: #8 Black Nickel Barbless

Chibi Minnow

What it seems a classic wobbler can actually reveal to be something new, once in water. The Chibi Minnow is a tiny wobbler that is fantastically right for its small size. Only 3,5 grams and 50 millimeters, together with an oversized lip, are a powerful combination that gives a special action to this lure, impossible to get with standard proportioned lures. The slim profile of the body replicates the shape of a starving and sick small fish that every predator will look as an easy to go lunch.

CHIBI LURES
PRO SERIES LURES

Chibi Viber

The Viber is an atypical lure and cannot fit the standard classification, being not exactly a vibration lure, nor a minnow and not even a spoon. We can define it a moving colour element that can surprise the predators when used close to the bottom. The body is a flat slice of lead that has been painted in bright colours and given two 3D eyes.

Chibi Spinnerbait

Despite most of the anglers already know and use standard lightweight spinnerbaits, let's say half an ounce and heavier, for sure many of them never saw this kind of lure downsized in a so short version to be really considered an ultra light lure. The Chibi Spinnerbait is a small lure of only 3/16 oz, so just more than 5 grams in weight, but designed to trigger the predatory instinct of a big fish. The secret lays in its peculiar and natural action, thanks to the low weight, in its appealing colour combinations and in the action developed by the small spoon, which turns and flashes with the swivel assistance, according to the lightest movement on the tip of your rod.

Chibi Vibe Spin

Metallic sinking lure weighing just 3,7 grams and 22 millimeters long. It is made with a metal body, specially shaped with a thick belly to keep the vertical swimming position and simulating a small prey fish. A "colorado" blade has been added in the rear part to add extra attractive flashes during the retrieve.

Chibi Spin Jig

The Spin Jig is a sinking lure built with a lead body representing a prey fish, dressed with holographic colours and with a "Willow" spoon imitating a flashing tail. It is equipped with chemically sharpened Powerpoint trebles, finished in Black Nickel for long life sharpness, proportioned to size and weight of each model. The Spin Jig is very effective when used in lakes, fishing for zander and perch. We suggest an "up and down" retrieve. We also recommend you to use in the deeper parts of small rivers and streams to stimulate the bigger wild trout to attack.

Chibi Asp Spin N' Jig

This lure has been specifically designed for asp fishing and have been built with great accuracy. The fulcrum of this bait is the heavy lead body which allows super long casting. Its shape is also perfect to be retrieved very fast, and easily keeps a vertical position. In case of use from the boat, this lure keeps the depth very well, thanks to the low centre of gravity and to the dorsal position of the line connection's eye. The tail willow spoon is adding attractive vibrations and flashes that will stimulate the attack from predators, as it spins quite well, due to high speed BB swivel's assistance.

187-21-005	Pink	0.9 inch 2.5 cm	12	5
187-21-006	Smoke	0.9 inch 2.5 cm	12	5

Small creature that vaguely reminds a shrimp, equipped with many appendices of different shape and texture, to maximize the number and quantity of vibrations. It is a true allround alternative lure that can be brought to life with the movement of the tip of your rod. Despite the small size, it is able to attract the attention of good sized predators. We strongly suggest you to use it in those venues where the fishing activity is very high and the fish is more spooky.

Speed Tail

The Speed Tail is a medium sized lure with a sinuous body and able to deliver a wide variety of vibrations. The ribbed body can actually create high frequency vibrations into the water, while the tail is creating low frequency ones. Deadly with small and medium sized predators. We suggest to use the lighter colours for salt water fishing, even for sea bass, where not only the younger specimen will be easily attracted.

Alien Stick

Small sized worm bait with a peculiar construction. The head of the Alien Stick is thicker and compact to allow a better rigging without risking to break it. The central part of the body is ribbed and much slimmer, designed to develop a much sinuous action and create many vibrations. The body is ending with a slimmer triggering tail that every predator will look with hunger. It is actually able to stimulate whatever predator, from trout to perch, including largemouth and sea bass.

MODEL				
187-21-021		Chartreuse	2.5 inch 6.5 cm	12 5

DROP SHOT
MICRO JIGHEAD

RIGGING TIPS
• Jighead
• Drop Shot
• Split Shot

Shaker

Small sized shad whose peculiarity is the flat back and belly, so really different from any other bait. A flatter body gives a totally different action and will result a completely new bait to the fish that is normally used to see a wide variety of baits all around. So it is the perfect solution for those lakes and rivers where the fishing stress is very high. The body is ending with a smaller part and two thin tails that increase the triggering action.

MODEL				
187-21-041		Chartreuse	2.7 inch 7.0 cm	12 5

187-21-105		Pearl Blue	1.3 inch 3.3 cm	8	5
187-21-106		Black	1.3 inch 3.3 cm	8	5

A typical silicone lure for summer season, when fish are used to pick up natural crickets accidentally dropping into the water, this Rapture version is scented and coloured directly into the compound for higher attraction and longer lasting. Micro Jig Heads are the perfect partners for this sort of ultralight lures, as they drive it to the swim's bottom, where they should be lightly twitched.

187-21-096		Chartreuse Black Flake	1.7 inch 4.2 cm	8	5

Dragonfly nymph silicone imitation, ideal for streams but also in the lakes during winter season. Once rigged on Micro Jig Head, whose weight should be chosen in relation to the swim's depth, the lure must be free dropped to reach the bottom and then lightly twitched. In order to obtain the most natural presentation, the line used must be the thinnest possible. Ideal for chasing Trout, Chub and Perch, is flavoured and coloured in the compound to be always effective even after several attacks.

Water Shrimp

It's a fantasy creature, whose small size makes it attractive to any sort of predator, in all seasons of the year. Ideal for winter lake Trout fishing, is always becoming very effective against Chub and Perch, who appreciate its particular movement, generated by numerous, reversed fins and dual tail, both under the water pressure and by their impact on the bottom. We recommend to rig it on Micro Jighead or Dropshot style, using the four natural colours in clear waters and the two lighter tones in case of dark or muddy conditions.

MODEL				
187-21-121		Watermelon Black Flake	2.4 inch 6.2 cm	8 5
187-21-122		Cola	2.4 inch 6.2 cm	8 5

187-21-126		Chartreuse Black Flake	2.4 inch 6.2 cm	8 5

Baby Cray

It is known that predators may refuse our lures, when they are already fed up, but in those conditions they will always accept an offer of tiny dimensions. Then the miniaturized Ultralight soft lures come into play, as does this shrimp imitation, available in natural colours or in high contrast ones, such as the Pearl Pink and Chartreuse, deadly in veiled waters, typical conditions of the trout fishing season's opening time. Micro Jig Head, Dropshot or Split Shot styles are recommended, because such light lures require a carrier to be cast and reach the bottom.

MODEL				
187-21-141		Watermelon Black Flake	1.6 inch 4.0 cm	8 5
187-21-142		Green Pumpkin Black Flake	1.6 inch 4.0 cm	8 5

187-21-145		Pearl Pink	1.6 inch 4.0 cm	8 5
187-21-146		Chartreuse Black Flake	1.6 inch 4.0 cm	8 5

Crayfish

It's a faithful imitation of crayfish, which is now part of all freshwater's predator diet, featuring floating claws that tend to raise upwards, simulating the attitude assumed by the natural one when scared or simply alarmed. Its scale size is reduced, but the attractive potential is higher because the silicone compound is coloured and scented internally, in order to survive to numerous attacks. It should be rigged on Micro Jigheads, Drop Shot or Split Shot style to catch Trout, Chub and Perch. His recommended retrieve style is quite simple, with short ascents and falls to the bottom.

Iwashi

Classical Light Rock Fishing lure. It is perfect to be fished close to the bottom, with small twitch and numerous pauses, when usually it will be bitten with confidence. Iwashi is not inspired by any natural bait, but it can remind a small shrimp when you twitch it on the bottom.

Chatterbait

NEW

Chatterbait is a wire bait characterized by an hexagonal blade, placed in front of a jig with a colourful silicone skirt. In essence, it is a cross between a jig and a spinnerbait: during the retrieve, the water pressure makes it swings frantically, producing a particular sound that recalls the beating of the teeth (hence the name) and which draws Black Bass, Pike and Zander attention from a distance, even in murky waters.

Umbrella Rig

The Umbrella Rig is the most realistic imitation of a school of small fish, formed by a head from which depart five steel arms that end with swivels and snap locks where you can attach your soft swimbaits, worms, grubs, jigs heads and small spinnerbaits. It can be used with a steady retrieve, eventually varying speed and direction by rod and reel work, to perfectly imitate the running fish fry which stay tight to feel safe from predators. Ideal when used in combination with jig head and Rapture power shad.

Spinnerbait Arm

Rapture Windex Spinnerbait Arm converts any jighead into a spinnerbait, enabling it to swim through aquatic vegetation and also creating attractive turbulence and shiny flash. Stainless steel wire and ball bearing swivel grant rotation, while the snap allows to quickly interchange the blade. The pack includes three colour's blades like Natural Silver, Fluo Orange and Pearl White.

SPINNER
PRO SERIES LURES

Helix Spinner

Spinner displaying the highest quality profile, able to express a perfect swimming action even at slow retrieve speeds. Thanks to the relevant bridge which connects the blade to the axis of the lure, it enters the rotation as soon as it lands on the water surface, with the ability to trigger a reaction attack by a predator that may be present in the immediate vicinity. Ideal for hunting Trout in the streams, they turn out to be also great for Chub and Perch.

Spinner AGF

This spinner gives its best with trout and other predators in streams and mountain rivers, to trigger the fish even in crystal clear waters or when the sun light is very bright. The coloured dots are perceived as small, slow moving particles, exciting the fish to the attack.

Spinner AG/TW

The striking colour pattern, made by black spots and red tracery, represents an effective alternative to the more classic designs and it is able to trigger the predator instinct. The body shape allows a nervous and scattering action, replicating the movement of a suffering prey.

Prism

Superior quality spoon, designed by the Rapture Staff members for the Area Trout game. All details have been carefully considered, the material used, the action and the finishes are really of outstanding quality. The concave body fall slowly into the water creating a great rolling action able to entice trout to bite, while with a slow and steady retrieve Prism produces an high-wobbling action that trout can't resist. Fitted with a single barbless hooks and individually handcrafted.

SPOON
PRO SERIES LURES

Sysma

Sysma has been designed with computer assistance: it looks like a classic teardrop shape, but has two "shoulders" that slow down its fall and produce an inimitable sound. As a matter of fact, it sinks to the bottom at the same speed as the pellets used in breeding farms, something that the trout trust a lot, which makes the spoon very effective in the search of difficult fish during competitions, or through the spawning time, especially if it is used in slow go up and down near the bottom. All the colour variants belong to the Cluster class, sprayed to obtain absolutely random effects without causing any glare. Single hook made from hi-carbon steel with barbless 3D Cut point.

Masu TR

In Japanese language Masu means trout. And actually we created this ultra light spoon specifically for trout fishing in lakes. The sinuous action, together with the vivid colours, are the strong point of this effective spoon. The lure is armed with single hook, and this helps to practice catch & release; some colours are matt finished, according to the most recent trend which has raised worldwide.

Area Spoon Set

Area Trout is the keyword that identifies the specific spoons for lake trout fishing, a discipline which was born in Japan and now quickly spread all over Europe. It's the target field of these excellent lures, offered in a set of three pieces, characterized by different shapes and weights to offer three actions and enable the angler to scan all water's layers in search of Trout. In order to encourage catch & release, all models are equipped with single barbless hook, a key specification to respect fish health.

Nail Spoon Set

Rapture offers an interesting solution in this set of three pieces. The blister contains three lures of the same size, but of different weights; two of them are equipped with a single, barbed hook, while the third features a treble hook. The shape of the blade, wide and comparable to a nail, amplifies fluctuations in the retrieve and slows the descent to the bottom during breaks; at that stage, light jerks made with the rod's tip give vitality to the bait and can suddenly trigger an attack. Ideal for Trout, Chub, Asp, Perch.

SPOON
PRO SERIES LURES

Rainbow Trout

This spoon features a very aerodynamics shape which allows long and accurate cast and a circular, 3D coloured insert to improve attraction and visibility. As a matter of fact, the blood red colour and the diamond cut of such "eye" are the elements which made this lure so unique and efficient if compared to all the others. It can be used in lakes or creeks targeting trout, chub, asp and perch.

Silver Trout

This spoon has been designed with a very slightly curved body to reach great casting distances and also go down at high depths, as the body is able to quickly "cut" the water. Thanks to this feature, you can also retrieve it at very high speed. Excellent for fishing in lakes and rivers targeting trout, asp, chub and perch.

T.Spoon

T Spoon series features an amazing range of highly attractive colours. The special holographic coating allows high visibility even in low light conditions or when the water is quite muddy. The blade profile is just perfect for medium-slow retrieve, which is so effective in stillwaters. We recommend several stops to let the spoon drop to the bottom where it will be very likely attacked. Fitted with original VMC treble hooks.

Blade Cast

Long casting spoon designed to reach great distances, thanks to the streamlined profile and to the body's thickness. During the retrieve, the special bow in the blade produce a neat roll, which sends sharp flashes in the underwater environment and also helps to maintain the deep route. Extremely efficient also in sea spinning or inshore trolling.

SPOON
PRO SERIES LURES

Smarty

Wide family of spoons for fishing in ponds and lakes that will not miss to attract your attention and of course that of predators, thanks to their striking colours. Such a combination of frenzy action and bright colours will for sure stimulate the attack of the most lazy predator. All colours have been chosen to create strong contrast with the surrounding environment. The Smarty is available in 2 sizes: 3 and 5 grams. The smaller version is highly performing in the upper layers, especially in late Springtime and early Autumn. The 5 grams is the best choice to head off the trout schooling far from the bank.

Niji Spoon

A slim shaped spoon, whose profile recalls the body of a minnow, also thanks to the large eye intended to draw the predator's attention already in the early moments of its swimming. Its blade silhouette, with forwarded center of gravity, has been carefully studied and drawn by computer to optimize the casting distance and flight stability, even in the presence of a headwind. Great lure for lake Trout, Perch, Asp, is also at home in the streams for Trout and Chub, as it quickly reaches the bottom, thanks to the high weight/surface ratio, and keeps swimming very well in the heart of the current. The double ring connection to treble hook eliminates the risk of missing the fish when it jumps out of the water and shakes the head.

Native Spoon

Eclectic spoon, with an effective movement both in retrieve and with slack line during the fall to the bottom. It is equipped with two interchangeable hooks: one barbed, one barbless. Specifically designed for the native Trout, it offers a complete range of the most updated Rapture colours: random and discrete Cluster colours, which don't cast any flash; UV colours to be seen by fish at a distance or in low light conditions; Nature colours to imitate the usual Trout prey; fantasy colours to play a joker when everyone else has failed!

Wacky Alive Stick

The Wacky alive stick has been designed from the ground up to be the ultimate wacky rig worm. The worm is made with a special silicon formula loaded with one of the heaviest salt concentration in the industry! Wacky rig the Wacky alive stick through the middle for best results. Cast the Wacky alive stick near a dock, stump, or at the edge of a weed bed and let it sink naturally. Give it a gentle twitch or two as it sinks to flex the lure in the middle for enticing action. With its bulbous ends and exclusive 'center-flex' design, the Wacky alive stick maximizes the typical wacky worm 'U' action.

Flat Ribbed Slug

A long-time favourite among US professional anglers, the Flat Ribbed Slug has a tantalizing action that makes it ideal for a wide range of applications. Whether it's used on a Carolina-rig, drop shot, or shaky head, the action of the Flat Ribbed Slug, whose body is salt and scent impregnated, is great for getting sluggish bass to bite. The Flat Ribbed Slug also works well as a follow up bait when bass are hesitant to commit to a primary lure. Even when the bite is tough, the Flat Ribbed Slug has that little something extra that bass just can't resist.

Ziggy Grub

RIGGING TIPS

- Texas Rig
- Trailer Jig
- Drop Shot

MAGNA SUPER LOCK WORM

The Rapture Ziggy Grub is actually a bait in between a grub and a worm. The ribs along the body give it a bulkier appearance and displace a significant amount of water, creating a lot of vibrations. The ribs also give the Ziggy Grub a feel and a texture that bass love, causing them to hold on longer for better hooksets. The soft, thin, flexible curly tail provides additional action on the fall.

SWIMBAIT SPRINGLOCK

OFFSET WORM JIG HEAD

Specifically formulated to appeal to predator's sense of taste and smell, the Fun Tail Grubs are perfect for a variety of rigging applications, including jigs and spinnerbait trailers. The Fun Tail Grub's tapered body offers extra holding power and a fast swimming tail. Once a fish bites into Fun Tail Grubs, the scent and inner salt, impregnated into the bait, causes fish to hang on longer for more positive hooksets. Though designed specifically for fishing bass, these little critters will catch all species of fish.

Minnow Grub

The Rapture Minnow Grub is an excellent bait for zander and largemouth bass, but can also be a good lure for sea bass fishing. The compact body allows an aerodynamic position during the cast while the dorsal fin stabilizes it during recovery. The large tail is equipped with a unique profile that greatly enhances the attractiveness. The specially shaped tail edge, in fact, generates many high frequency vibrations that increase the efficacy of the low frequency vibrations of the main part of the tail.

Xciter Shad 75

Flat sided shad featuring a distinctive action of the tail and a more marked wobbling. The belly has an useful groove that adds vibrations and can easily hide an additional weight. The Exciter Shad is an excellent lure for zander and pike, but it can be used in salt water, rigging it on a jig head.

Stick Shape

Salted and scented soft bait with triangle shaped ribbed body ending in a thin tail, featuring of a thicker final part. This shape allows the tail to shake very easily and delivering a very appealing action. We suggest to use it with drop shot rigs in clear water conditions. Flavored and colored in the compound, Stick Shape is packaged in a resealable bag.

**SHAD SERIES
PRO SERIES LURES**

Finezze Worm

Its strong point is the thin profile of the body, which ends with a particularly fine tail. In water it mimics the movements of a small minnow, amplifying the inputs coming from the rod's tip to tease Trout, Perch, Black Bass, Zander and Seabass in difficult swims, maybe subject to high fishing pressure or populated by tiny dimension's preys. Coloured and scented in the compound, it's perfect in winter to stimulate aggression of lake Trout, where it can be hooked on a Micro Jig Head, or, when the waters are particularly clear, rigged "finesse" style with Dropshot or Split Shot for a more natural presentation. The range of available colours is very wide and extremely updated. Packaged in resealable bags with individually separated lures.

Evoked Worm

A great flexibility and impressive mobility characterize this silicone bait having a very special structure. First of all the body, which is crossed by endless ribs, which are able to incorporate tiny air bubbles in the moment of impact on the water, that are then released during the retrieve. In the second place, but not least, the long and soft tail, which culminates in a small floating sphere. As a consequence, the lure displays a remarkable restlessness, to be enhanced through rigging style Dropshot, Split Shot or Micro Jig Head, that surely doesn't go unnoticed to the main freshwater predators such as Black Bass, Pike and Zander, but also Trout, Perch and Chub especially in the smaller size. Flavored and colored in the compound, Evoked Worm is packaged in a resealable bag with individual compartments.

POWER SHAD

Power Shad 50

A soft shad flavoured and coloured directly in the compound, proposed in a vast family of sizes and colours, which is now extended with some interesting solutions. The body is prepared to accept the hook and keep it in place with the pre-cut mould design; with a particular gradient, the hammer tail tends to move a significant amount of water, drawing the attention of predators from a fair distance, while the joint that marks its beginning emphasizes the mobility of the whole lure.

Popper Frog

A wonderful fusion of a frog and a popper, able to offer the advantages of both lure concepts! Clearly addressed to the summer fishing of Black Bass, Pike and Asp, it is able to reach considerable casting distances because it is loaded in the tail area. The hyper-realistic colours, in combination with a silicon skirt, create an irresistible attraction for predators. The concave front moves a good volume of water under the impulse of rhythmic jerking performed in the retrieve, creating the classic sound that gave its name to the popper. The metalware consists of a sturdy wide gape double hook, made from hi carbon content steel, the points of which adhere to the profile of the bait to achieve the snag free condition: as soon as the fish compresses the soft body.

Dancer Mouse

It triggers the topwater attack of Bass, Pike and Asp with the combined action of its hyper-realistic motion and the tail blade. Not just a common mouse, but a deadly efficient lure. The Dancer Mouse is equipped with a forwarded weight to fly very far and hit water with the right position to start swimming. The tail is flexible and sinuous to develop additional vibrations, while the blade is assisted by a rolling type swivel. With the pressure exerted by the predator's mouth the soft, hollow body collapses, exposing the deadly points of the double hook, made from high carbon content steel. On the nose, the connecting eyelet is fully sealed to prevent water entry.

**RIGGED BAITS
PRO SERIES LURES**

Dancer Frog

Frog imitation with hollow collapsible rubber body. So realistic and so effective for surface fishing, it casts very well and, once in water, it moves very naturally. Silicone skirts imitate the legs without creating snagging problems, so you can use the frog between weeds. The chemically sharpened double hooks are so strong to allow to literally "extract" fish from heavy covers. The body has an internal rattling system to increase to the max the attracting power, specially when it lands on thick covers or hits reed's walls. Nevertheless, the rattling system is removable to increase lure's buoyancy and visibility above water.

Mad Spintail Shad

Developed with the latest technologies, to deliver a tremendous fish catching action and life like 3D body and details. Mad Spintail is a pre-rigged soft shad, fitted with a willow blade on tail thus to create vibrations and flashes to entice the attack. The blade runs smooth at slow speeds thanks to a quality swivel, connected to a central wire through the soft body, while the lure cast as a rocket due to the streamline body and its weight. Great to fish on with a linear retrieve on weed cover or close structures, exploring the water column simply by varying the retrieval speed, or for deeper water presentations you can alternate a steady retrieve by twitch and jerking action to make lure rise and fall.

Dancer Perch

Perch and roach are natural preys for many fresh water predators such as pike, zander, black bass and catfish. Rapture has introduced some perfect imitations with a sinking action, created from the softest materials and with a perfect swimming action. In 2012 Rapture designed a 5 sections soft bait of just 12cm (34g) to complete the existing Dancer family and that can be easily used even with common spinning rods and reels. The colours and details have been carefully selected to give you great success with the big predators.

Quick Jig

Movement, colour, vibrations and sound waves caused by the contact with the bottom. An appealing mix of messages which can be sent to the bass or pike with a skilful use of rod and reel. It's the unique job done by Quick Jig with its 10 gram's head and with the skirt made from elastic monofilaments. But the real advantage created by Rapture Team is the interchangeability of the hook, a size 4/0 Super Lock linked through a split ring. A big plus which widens the chances of success, because it enables the application of different hooks or their simple replacement when the point sharpness is down.

Flexy Bottom Jig

Flexy Jighead is the most versatile bottom jig ever! It allows to change in a while both the hook and the lead weight, just take the clip out from the jig, insert the hook in the snap and place it back into the head. Flexy Jighead improves also the swimming action of your lures, thanks to the additional freedom of movement.

Series of hooks to be used with swimbait or shads. The hooks is screwed straight into the body of the bait and the weight is positioned under the central part of the body. In this way the swimming action is really super natural and better if compared to the one got using a traditional jig head instead.

Assist Native Barbless

One of the latest trends in wild Trout's river fishing is the use of Assist Hooks to rise any minnow's efficiency. So the most advanced anglers have taken the concept from saltwater area and replace standard hooks with the advantage of higher mobility, superior hooking capacity, reduced hook's pulls and, at the same time, respect local rules about single hooks. Rapture models are built around spaded end high carbon content steel hooks and are available either in Barbless and Micro Barbed version.

Assist Native Micro Barb

REAL SIZE

- BK** Black Nickel
-  Forged
-  Bent
-  MicroBarb

If you don't feel well with Barbless version of Rapture's Native Assist hooks, here is your tailor made solution, which offers all same specifications plus a micro barb. Maybe those large Brown Trout won't be happy to find that the hook is still fit, after designing those heartbreaking «eight» loops in the water, which are their trade mark. Replace all hooks on your favorite minnow with one or two of these assist hooks, and you will have sharply improved the lure efficiency.

Assist Light Game Iseama

From today the saltwater's Rapture fans have a new weapon in their armory, a real catch rate's booster while hunting for predators with hard lures. It is SW Light Game Assist hook, built around a super strong Iseama pattern from reliable material such as heavy duty split rings and PE line, fixed around the shank by a protective wrapping, then lacquered in red to add appeal. Removing all hooks from the lure and replacing them with these Assist models is the key for success.

Offset Wide Gape hook designed to bait worms and creatures with fat bodies. In its smallest sizes it can be well employed also for drop shot techniques in conjunction with small shads. Featuring high carbon steel and super sharp needle points.

Area Pro Hook Releaser

REAL SIZE

The special head's design allows to release the Trout in two different ways, according to the direction taken by fish.

Rapture Measuring Zinger is the ideal accessory to link the Releaser to the angler's trousers (Item nr. 101-47-520).

A must for the serious Area Trout angler, this tool enables to quickly and safely remove the hook from trout's mouth without touching the fish. Thanks to very fine materials such as carbon and hi-density EVA, the Rapture solution is ultralight yet very stiff.

- Stainless Steel head
- Light and stiff reinforced Carbon stem
- Comfortable EVA handle grip, with finely xengraved Rapture logo
- Ring at the bottom end for Zinger connection

		HOOK	XXX	PCI
101-47-400		1	5	

In case the releaser drops in the water, it floats thanks to EVA grip and light weight carbon stem.

AreaBox Tackle System

NEW

Super tough, but lightweight, Rapture AreaBox Tackle System are designed to store and carry your tackle in pinpoint conditions, whatever your fishing style and providing a comfy seat if needed. Aimed to contain the Rapture TekBox series.

- Including, two Rod Rack, an inner tray, and removable inner dividers
- Shallower room under the lid, for terminal tackle
- Folding handle, also acting as lid support, once open

The handle also converts into nice and reliable support for the lid, to create a wide table for lures and terminal tackle.

113-20-700		43.5x23 h 28 cm	1	1
------------	--	--------------------	---	---

AreaBox Rod Rack 32

NEW

For any fishing style, the opportunity to keep the rods to hand and safely locked is invaluable. This important accessory does the job brilliantly. Made from sturdy ABS and Polycarbonate, it can be installed on both sides of the Area Box by an easy and quick clip. In order to match the rod's reel seat position, it can be adjusted in 2 different heights.

REEL'S FITTINGS
The top end of Rod Rack is shaped to accept reel's foot in four directions and keep the rod stable.

ADJUSTABLE HEIGHT
The Rod Racks can be applied to the box sides and adjusted in height under 2 steps, to match any different rod's reel seat's position

5

Lure Keeper

Rapture Lure Keeper is a simple way to avoid sharp hooks swinging around. The Rapture Lure Keeper is incredibly easy to install, just position as desired, wrap the UV proof O-ring around the rod, and then secure the O-ring into the grooves on both sides - that's it. When it is not in use, the Rapture Lure Keeper folds down to prevent any tangles or snags.

Each lure keeper is supplied with three elastics of different diameter, so it fits any rod blank's size.

The body can be folded when not in use to reduce its size and avoid tangles.

ACCESSORIES**

YAK Rubba Net

Rapture Yak Nets are designed for Kayak and boat fishing! The heavy duty, uniquely design ergonomic rubber grip gives you a great grip and leverage to lift big fish with single hand with ease, delivering a perfect support to forearm and elbow. Yak Nets are completely sealed and they're able to float, while the deep rubber mesh gives easy and safe handling of the fish and avoids lures to be tangled in the mesh. Yak Nets are available in three sizes, from S to XL, fitting perfectly the needs for both freshwater or saltwater anglers.

The handle frame slide inside the head thus to reduce size during the transport.

	MODEL		PC
084-51-900	M	50x40/135	1
084-51-910	L	60x50/155	1
084-51-920	XL	70x60/175	1

The rubber handle let lift big fish with ease and safe.

Ergonomic handle design allow for single hand operation.

Telescopic handle system is easy to carry.

The locking button is fast and easy to use.

Strap with safety fastener hook.

The latex deep rubber mesh offers anti-tangle and fish friendly features.

Easy Rubber Mesh Net

Landing net designed for predator and street fishing. The rubber net is perfect for catch and release.

The clip on the handle enables to hang it to a belt. Whilst the handle can be folded down for easy transport.

084-50-600	Ø 45cm 50 cm	100 cm	1
------------	-----------------	--------	---

Aggressor Pro Net

Wide range of predator landing nets made with no compromises and designed for whom are looking for strong emotions! Perfect to target oversize predators both in fresh and saltwater, Aggressor-Pro are designed to offer performances, practicality and to last over the time. The frame is entirely built with anodized 6063-T6 grade aluminium, light yet strong, with ABS joint parts and rubber inserts. The head is shaped with the use of a strong aluminium profile to reduce bending and increase resistance. Whilst the mesh is made from soft TPR rubber with a 3D design, extremely resistant, totally "hook-proof" and perfect for the "catch & release" offering optimal protection for fish.

- Frame entirely made of anodized aluminium 6063-T6
- Joint parts made of shock-proof ABS plastic
- Ergonomic handle - with retractable handle
- Soft rubber TPR 3D mesh with flat bottom
- Hook-Proof mesh perfect to be used with trebles and for the "catch & release" offering optimal protection for fish
- Perfectly floating – it lies flat on the water.
- Resistant to elements – perfect to be used in freshwater and saltwater.
- Available both with 1 section handle or telescopic 2 sections.

The ABS blocks guarantee a firm grip in all conditions and a secure fixing of the net head with a handy push-button system (photo on the left). With the same system it's obtained also the telescopic joint part in the handle (photo below).

The handle frame slide inside the head thus to reduce size during the transport.

DRYTEK

The answer of Rapture to the most advanced spinning instances is called Dry-Tek. It's a special waterproof fabric, which is also lightweight and remarkably tear-resistant, characterized by a rectangular nylon mesh, visible thanks to the unique, squared surface web. Widely used in technical clothing, camping sheets and military accessories, as well as in the gliding field, it proved to be perfect for the luggage range designed to accompany the modern spinner in his adventures in fresh or salt water.

Drytek Pro Carryall

Bag designed to hold a myriad of lures, as well as small accessories. In addition to classic rooms for lures, on either side there are plastic boxes with mobile compartments. Adjustable shoulder strap and comfortable EVA handles. The overhead compartment houses some transparent pockets for the ready leaders, closed with hinges that keep the inside dry. In the main section there are many vertical cells intended to house the hard lures. In the front pocket more rigid compartments for immediate use lures.

FLY FISHING REELS
LMF SERIES

LMF CLK Fly Reel

Click Drag System

It takes its name from the typical sound of the permanent click drag: an ultralight, simple ambidextrous with unlimited durability. The absence of an adjustable disk braking system makes it ideal for medium light fishing, but eliminates any inconvenience. In case of bonus fish, you can still give line by checking the reverse rotation of the reel with the hand's palm.

Durable click and pawl drag system to prevent over-spooling. Manufactured from a high-quality, lightweight, 6061-T6 aerospace grade aluminium, cold forged and tempered for superior strength and rigidity. Fully machined, one-piece frame, one-piece spool. Hard anodized for surface protection and corrosion resistance. Large arbor design speeds retrieve and reduces line memory. Deep spool for increased backing capacity. Ultimate lightweight design. Ergonomic handle.

Guide Master XLT

You don't need to be expert in fly fishing or graduated in mechanical engineering to recognize at first contact the extraordinary quality of these super lightweight reels. Both the body and the spool are machined from a solid piece of aluminium under the assistance of the computer, as certified by the characteristic micro-grooves left by the tool, which are easily visible through a good magnifying glass. So the structure is much more rigid than a cast one, and the rate of required resistance is achieved with thinner gauges, to the advantage of lightness. The anodized surface has finally allowed to reach a perfect balance between the need to protect the structure from oxidation and to fix the colour. The body design with three rays makes its overall appearance extremely sporty and aggressive, while the oversized diameter of the spool's core (large harbor) is the seal that attests the modernity of the reel, with its high retrieve speed, the sweet release of line coils and the outstanding consistency of drag performances. The reel can easily be converted from right to left, and is equipped with cloth bag. The transparent box showcases its beauty already on the store shelf.

	MODEL	Ø

Guide Master ADC+

Dedicated to those who want to face the first experiences in the fly fishing world with quality tools, but without investing a fortune, this reel is still able to satisfy the casting style of those who already have some experience. The aluminum frame offers a good balance between strength and lightness, while the spool is characterized by the efficient and now indispensable oversized core (large harbor) and by the release system that allows easy access to the roller bearing, in order to convert the reel from right to left. The anthracite satin grey is discreet but very much fashionable.

Loomis & Franklin IM 12 Small Creek

Fast action blank designed to get accurate cast on small waterways and mountain creeks. Perfect for dry flies. Rods characterized by a remarkable fineness and lightness of the blanks, accompanied by a relatively fast elastic response, the result of the physical properties of the IM12 Modulus carbon material. The natural cork handle, with hybrid cork reinforcements at critical points, ends with a satin-finish aluminium reel seat. The Seaguide fine quality single foot stainless steel guides offer a total resistance to corrosion, while the double foot stripper guide has the SiC ring for smoother operations. The four-section (3 sections for the 7'6" #4) configuration facilitates transport, which takes place in an elegant rigid tube equipped with a handle and shoulder strap with separate compartments to avoid contact between sections.

Loomis & Franklin IM 12 Euro Nymph (Extendable)

Series of rods dedicated to modern nymph fishing techniques and to all those who are looking for a multipurpose tool on which they can count on every occasion. They are characterized by the exclusive telescopic structure of the base, which without the aid of additional sections, allows easy adjustment of the overall length by approximately 17.5cm, thus to suit different fishing conditions and styles. Blanks characterized by a remarkable fineness and lightness of the blanks, accompanied by a relatively fast elastic response, the result of the physical properties of the IM12 Modulus carbon material. The natural cork handle, with hybrid cork reinforcements at critical points, ends with a lightweight satin-finish aluminium reel seat, which is fitted upside-down to achieve a better balance of the rod. The fine single shank stainless steel guides are of Sea Guide quality for a total resistance to corrosion, while the double shank stripper has the SiC ring. The four-section configuration facilitates transport, which takes place in an elegant rigid tube equipped with a handle and shoulder strap with separate compartments to avoid contact between sections.

FLY FISHING RODS
LMF SERIES

Loomis & Franklin SX Small Creek & Creek

NEW

Fast action blank designed to get accurate cast on small waterways and mountain creeks. Perfect for dry flies. Designed one by one for a specific field with technical assistance and expertise of Sandro Soldarini, these new Loomis & Franklin rods should be tried and tested before taking a look at the price, because they are really able to go far beyond the inevitable prejudices to which we indulge too often in the moment of the purchase. Built from Intermediate Modulus Carbon (IM8), they are structured in four sections and supplied with stiff tube for easy transport. Guides are single-legged, except the stripper one, which is a Sea Guide double leg SiC. The handles are made from natural cork, reinforced by hybrid composites in the points subject to greater wear, include anodized aluminium reel seat.

SPINNING RODS
LMF SERIES

Loomis & Franklin IM7 Classic Predator

Because of its wide versatility and the most widespread use destination all over the world, it has been adopted by the designers as the leader of the range, as an emblem of the L&F project. In fact, the Classic Predator series is able to range from fishing to Trout or Asp with metal lures and minnows, to spinning with large spoons for Pike and Zander, until the hunt for Black Bass or medium sized Catfish with hard lures or silicone lures in canals and backwaters, where all its blank's power is vital to quickly extract the predator from the intricate underwater features.

	MODEL	Length	Tip Length	Weight	Sections	ACT	PWR	Lure Weight	Line Weight	Material

Loomis & Franklin IM 7 Trout Spinning

The world of native trout spinning in the streams appreciates rods which are light, fine, accurate in the cast and resistant to accidental shocks, like these wonderful creatures in two sections, born from the use of IM7 carbon to ensure a delicate balance of all those factors while fishing with minnows and spinners. The progressive parabolic action makes the most of the catch in case of stealing a small fish from a narrow environment as well as fighting with the dream fish in a deep hole. The handle is made from natural cork, split to offer maximum control of the casting action, both with two hands and underarm style, necessary to reach the most difficult spots. It incorporates a reliable graphite reel seat; its ends feature hybrid cork inserts that add a touch of classic elegance, beyond the protective function.

	MODEL	Length	Tip Length	Weight	Sections	ACT	PWR	Lure Weight	Line Weight	Material
121-77-010	IM7 TS632S	6'3" - 1.90 m	99 cm	2	MF	UL	1/32 - 3/16 oz (0.8-5 g)	2-6 lb	SiC

121-77-012	IM7 TS702S	7'0" - 2.13 m	109 cm	2	F	ML	1/16 - 5/16 oz (2-8 g)	4-8 lb	SiC	

Loomis & Franklin IM 7 Finesse Rig

Series designed to implement the search for difficult fish, with ultralight approaches at the level of the silicone lures and the Jig Heads needed to make them work properly. Thanks to the sensitive top section, it is immediate to receive the finest messages coming from the bait through the line, which is usually braided. That's why the guides have a very stiff long-leg frame, with a K-profile to prevent tangling. The relative length of the three models is also useful in Street Fishing, where fishing is often carried out from high banks. Natural cork split handle with hybrid cork reinforcements and integrated reel seat.

	MODEL	Length	Tip Length	Weight	Sections	ACT	PWR	Lure Weight	Line Weight	Material
121-77-020	IM7 FN682S	6'8" - 2.03 m	104 cm	2	MF	UL	1/32-3/16 oz (0.8-5 g)	2-6 lb	K SiC

Loomis & Franklin IM 7 Drop Shot

Perch, Black Bass, Zander, Chub: the classic prey of the Drop Shot technique are the target for these highly technical rods, able to offer fast action, maximum sensitivity for fishing with braided lines and curve perfection because they are designed with sections of different length. The butt section is short and stiff, and ends with a spigot joint, while the top is a one-piece tubular which carries all guides. To achieve minimum volume and maximum manoeuvrability, a graphite reel seat integrated into the natural cork handle has been adopted. Drop Shot rods are also ideal for use from kayak, belly boat or stand up board (SUP).

Loomis & Franklin IM 7 Swimbait

Series designed for the use of generous size lures, intended for the capture of relevant size predators such as Pike, Zander and Catfish. With regard to the power developed by IM7 carbon blanks, these rods are characterized by a low weight, to the advantage of movement's freedom during the retrieve action. The detachable handle and single-piece long top section configuration is the most qualified in terms of curve accuracy, balance, power and strength. The series consists of two rods set for the spinning reel and one for the multiplier, with the specific reel seat and differentiated guide's pattern, in any case Sea Guide with SiC ring and K-profile tangle free single and double leg frame, suitable for braided line's use.

	MODEL				ACT	PWR

Loomis & Franklin IM 7 Swimbait & Jerk

It is a variant of the Swimbait series, of which it preserves the structure with differentiated sections, but from which it differs for its superior power, which is not only designed to cast heavier lures but also to manage their swimming action, because their volume and their shape generates a huge pressure on the top of the rod. In the most energetic jerks, necessary to attract the attention of great Pike and Catfish, the rod responds with extreme precision to the received impulses, transferring them to the lure without any dispersion. A spinning model and a casting one with Sea Guide SiC guides and dedicated reel seat.
